A class of 22 students went on a field trip to four different locations in Chicago. Each group ate lunch at their location. The cafeteria packed 17 subs for the class. A group of eight went to the Field Museum. They got 7 subs. The five students at the Art Museum got 4 subs. The four students at the Planetarium had 3 subs. That left 3 subs for the 5 students at the Aquarium. The next day some of the students complained that some kids got more to eat than others.
