

Ohio's Standards and Model Curriculum  
**Computer Science Grade 5**

DECEMBER 2018

# Computer Science Model Curriculum for Grade 5

Strand	Computing Systems	
Topic	Devices	
<p><b>CS.D.5.a</b> Explore the internal parts of the computing system and their function to understand and describe the role they play in a computer system.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students developed their understanding of what external components are used to share information. In grade 5, students develop their understanding of the internal parts of the computer and how they play a role in the computer system. In grade 6, students will apply knowledge to identify the benefits and limitations of devices.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Different internal parts of a computer have different purposes</li> <li>• Each internal component has a different function in a computer system</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Identify key internal components (i.e., parts) such as RAM, hard drive, CPU, motherboard, etc.</li> <li>• Describe the function of each of the key internal components</li> <li>• Describe the internal components of the selected device</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Internal components (i.e., parts) at this grade level focus upon RAM, hard drive, CPU and the motherboard. Students do not need to have an in-depth understanding of these.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus should be upon students understanding the role major internal components (i.e., parts) play in a computing system. Unlike external components which are not all needed in order for a device to function, internal components are critical to the device running properly.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 2. Collaborating Around Computing</i></p> <ol style="list-style-type: none"> <li>4. Evaluate and select technological tools that can be used to collaborate on a project.</li> </ol>	

Strand	Computing Systems
Topic	Hardware/Software
<p><b>CS.HS.5.a</b> Evaluate digital learning tools/devices to support planning, implementing and reflecting across curricular areas.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students continued to select learning tools/devices and used them to aid in planning, implementing, and reflecting on given tasks. In grade 5, students use and evaluate the digital learning tools and devices they've chosen and consider the planning, implementing, and reflecting across curricular areas. In grade 6, students will look at the ways hardware and software components come together in a computer system to complete a task.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Software and hardware need to be chosen and evaluated to ensure they support the task</li> <li>• Learning tools should be used for planning, implementing, and reflecting across curricular areas</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Verbally evaluate the tools and devices chosen to accomplish tasks for their usefulness in planning, implementing, and reflecting</li> <li>• Use and verbally evaluate tools across curricular areas</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Students should recognize if the tool or device they have chosen is appropriate for the task. For example, if the assignment is to make a presentation, a word processing program would not be the best selection. Tasks should be cross-curricular (i.e. blending math, science, and computer science, tasks which require an analysis of data from science or social studies).</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students using and evaluating tools in cross-curricular tasks.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 2. Collaborating Around Computing</i></p> <ol style="list-style-type: none"> <li>4. Evaluate and select technological tools that can be used to collaborate on a project.</li> </ol>

Strand	Computing Systems
Topic	Troubleshooting
<p><b>CS.T.5.a</b> Diagnose problems and develop strategies to resolve technology issues.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students focused on diagnosing and describing potential hardware and software problems. In grade 5, students work to diagnose problems, describe the problem, and develop strategies to resolve technology issues. In grade 6, the problems will become more advanced. It will require the combination of critical thinking skills and basic knowledge of computing hardware and software to identify the problem.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Multiple troubleshooting strategies exist for each issue</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Diagnose problems in hardware and software</li> <li>• Apply a solution for the problem</li> <li>• Describe the problem and reason for the problem in detail</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Students are working on diagnosing problems, describing them and applying a solution where appropriate. Students should be able to describe the problem to a peer or adult. Students should be able to troubleshoot their own problems. Problems may include an unplugged computer, a computer not connecting to the network or a program not loading. Troubleshooting should also occur within individual programs, such as a block-based coding environment or a word processing program.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students diagnosing problems, describing them, and applying a potential fix.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 6. Testing and Refining Computational Artifacts</i></p> <p>2. Identify and fix errors using a systematic process.</p>

Strand	Networks and the Internet
Topic	Networking
<p><b>NI.N.5.a</b> Model how information is broken down to be transmitted and then reassembled to help students gain a better understanding of the internet and networks.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students described how information is broken apart, sent, and received over the internet. In grade 5, students demonstrate how information is broken apart, sent and reassembled when received over the internet. In grade 6, students will explore the protocols (i.e., rules) in transmitting data across the internet.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Manipulating a URL (i.e., web address) can change what information is accessed</li> <li>• Information is broken into packets (i.e., parts) at the sending point and reassembled at the receiving point</li> <li>• Information is sent to specific places based on web addresses</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Modify a URL (i.e., web address) to access content</li> <li>• Demonstrate what occurs when a URL is modified</li> <li>• Use a metaphorical example to describe how information is broken down into parts and reassembled</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Students begin manipulating a URL to access desired information within a site. Students begin using applications to shorten web addresses for ease of access. An example of a metaphorical connection students could make to describe how information is transmitted would be a roller coaster ride. The track could be seen as the internet connection and the cars and the people are the information traveling through the connection.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students modifying a URL, or web address, to reach a specific site and describing how the modification impacts the information accessed. Students model how information is transmitted.</p>

Strand	Networks and the Internet
Topic	Networking
	<p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 4. Developing and Using Abstractions</i></p> <p>4. Model phenomena and processes and simulate systems to understand and evaluate potential outcomes.</p>

Strand	Networks and the Internet	
Topic	Networking	
<p><b>NI.N.5.b</b> Apply knowledge of network addresses, names and rules (i.e., protocols) to discuss real-world scenarios.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students described how different naming techniques are related to the type of information accessed. In grade 5, students apply this knowledge by interacting with networks appropriately and apply these concepts to real-world scenarios. In grade 6, students will continue to apply this knowledge to more advanced concepts of networks.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>Information is broken into parts and reassembled at the end point</li> <li>The end point is identified by an IP address</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>Use knowledge of top level naming rules (.com, .edu, .gov) as it relates to reliability of information</li> <li>Explain the fundamental workings of the internet using appropriate terminology (e.g., packets, IP address)</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Students need to explain the steps required to transmit information over the internet. Students should explain that information is broken into packets, transmitted to another place identified by an IP address and reassembled at the end site, similar to a puzzle being taken apart, given to other people, and assembled somewhere else. Similar to a mailing address and a letter, the IP address serves as the location where information is sent. No discussion of IP address components (i.e., parts) are needed at this level.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on explaining the fundamental workings of the internet.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 4. Developing and Using Abstractions</i></p> <p>4. Model phenomena and processes and simulate systems to understand and evaluate potential outcomes.</p>	

Strand	Networks and the Internet
Topic	Cybersecurity
<p><b>NI.C.5.a</b> Demonstrate password creation techniques to develop and use a strong password used on personal accounts.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students described personal information and how passwords are used to protect that information. In grade 5, students create, implement, and store secure passwords to protect personal information. In grade 6, students will understand the concerns that information needs to be protected.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Password creation techniques</li> <li>• Apply personally created passwords to personal accounts</li> <li>• Protection techniques of passwords for personal accounts</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Create secure passwords utilizing password creation techniques</li> <li>• Build a strong password using password creation techniques</li> <li>• Apply password protection techniques</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Explain alpha-numerics, symbols, and non-dictionary words. Use alpha-numerics, symbols and non-dictionary words to build a secure password. Students often misuse password storage techniques. They need to understand the difference of using an online password storage system, saving passwords on the computer, writing down passwords, or remembering them and the benefits of types of passwords and storage techniques.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students building strong, secure passwords using password creation techniques and protecting passwords using different protection techniques.</p>

Strand	Networks and the Internet
Topic	Cybersecurity
	<p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 3. Recognizing and Defining Computational Problems</i></p> <ol style="list-style-type: none"><li>1. Identify complex, interdisciplinary, real-world problems that can be solved computationally.</li><li>3. Evaluate whether it is appropriate and feasible to solve a problem computationally.</li></ol>

Strand	Data and Analysis
Topic	Data Collection and Storage
<p><b>DA.DCS.5.a</b> Gather and organize multiple quantitative data elements using a tool to perform various tasks.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students built upon the use of tools from grade 3 to collect data from multiple sources within a singular topic over time. In grade 5, students begin to select appropriate tools to collect data from multiple sources within a singular topic over time. In grade 6, students will begin to evaluate the validity of data collection tools.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Keeping an organized record of data from multiple sources, over time, is critical to analyzing data</li> <li>• Different tools are used to collect different types of data</li> <li>• Tools impact the accuracy of data</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Select and use appropriate tools to collect and organize data</li> <li>• Maintain accurate data from multiple sources, using multiple tools, within a singular topic over a period of time</li> <li>• Collect data from multiple sources within a singular topic, by making repeated observations over time</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Tools that may be explored are digital thermometers, GPS sensors, calculators, scales, digital forms (survey tools), length measurement tools, a stopwatch, etc. Data can be organized by using various digital and non-digital tables and charts. Digital organizational resources could include spreadsheets, online graphing programs, etc. An example of collecting data from multiple sources within a singular topic could be collecting the height of students in three different classes, throughout the school year. Students should select the most appropriate tool for data collection. Students could choose between an online form, table, or simple document.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students selecting an appropriate data collection tool to improve the accuracy of data.</p>

Strand	Data and Analysis
Topic	Data Collection and Storage
	<p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 7. Communicating About Computing</i></p> <ol style="list-style-type: none"><li>1. Select, organize, and interpret large data sets from multiple sources to support a claim.</li></ol>

Strand	Data and Analysis
Topic	Data Collection and Storage
<p><b>DA.DCS.5.b</b> Compare and contrast file formats to demonstrate the advantages and disadvantages of each.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students began to gain an understanding that different file types may require different storage. In grade 5, students discuss the advantages and disadvantages of different file types. In grade 6, students will make choices about their file formats in order to organize data.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Different file types can be different sizes</li> <li>• Different file types have different purposes</li> <li>• How data is stored impacts accessibility</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Store data as a specific file type</li> <li>• Locate and retrieve data on a computing device (i.e. computer)</li> <li>• Consider file size when sharing and saving data</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Examples of file types would be image (i.e., .jpg, .png, .gif .bmp), document (e.g., .doc, .docx, .pages, .txt), multi-media (e.g., .mov, mp4, .wmb) and presentation (e.g., .ppt, .pptx, .key). For example, when creating a presentation, use slides instead of a document.</p> <p>Examples of data storage could include saving to a device, local network or the cloud. An example of file size impacting storage is the inability to download an app on a tablet due to lack of storage.</p> <p>Accessibility refers to the ability to retrieve data. Students should understand that data saved to a device will not be accessible without that same device. Accessibility also refers to the ability to open file formats on different devices.</p> <p>Information refers to data, which could include pictures, audio, video, and documents.</p>

Strand	Data and Analysis
Topic	Data Collection and Storage
	<p><b>CONTENT FOCUS</b></p> <p>The focus is different file types accomplish different tasks. There are pros and cons in using various file types.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 7. Communicating About Computing</i></p> <ol style="list-style-type: none"><li>1. Select, organize, and interpret large data sets from multiple sources to support a claim.</li></ol>

Strand	Data and Analysis
Topic	Visualization and Communication
<p><b>DA.VC.5.a</b> Organize and present collected data using visual or other types of representations to highlight relationships and support a claim.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students interpreted data in self-created graphs to present insights. In grade 5, students use graphs created to highlight and support a claim they have made. In grade 6, students will look for patterns and communicate relationships between data sets.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Data from a graph can be used to gain insights or solve a problem</li> <li>• The way data is interpreted and highlighted from a graph can support or disprove a claim</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Record data, with several categories, on a scaled bar graph or picture graph</li> <li>• Determine appropriate scale for data given</li> <li>• Interpret and answer questions regarding data presented in a bar or picture graph</li> <li>• Use a visual representation of data (e.g., picture/bar graph, line plot) to support a claim</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>An important concept for students to begin to understand is that a scale is chosen based on data available. Students should begin understanding that data is used to solve problems. For example, if the majority of people report they do not recycle due to lack of recycling bins, we can conclude that providing recycling bins to people will increase recycling and improve the environment.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students using a representation of data they have created to support a claim they have made.</p>

Strand	Data and Analysis
Topic	Visualization and Communication
	<p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 7. Communicating About Computing</i></p> <ol style="list-style-type: none"><li>1. Select, organize, and interpret large data sets from multiple sources to support a claim.</li><li>2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose.</li></ol>

Strand	Data and Analysis
Topic	Inference and Modeling
<p><b>DA.IM.5.a</b> Utilize data to propose cause and effect relationships and predict outcomes.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students determined if adequate data had been collected and ran simulations to explore outcomes. In grade 5, students run simulations to test theories and make predictions about how larger data sets affect outcomes. In grade 6, students will validate or invalidate a prediction about a collection of data.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Sample size affects outcomes</li> <li>• Trends can be found by analyzing data sets</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Use data to highlight or propose cause and effect relationships Predict outcomes using a data set</li> <li>• Manipulate data and explain outcomes</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Students explain patterns in data and identify missing values. They begin to manipulate data and reflect on how the quantity of data affects outcomes. Students will use software tools, such as spreadsheets to manipulate the quantity of data and reflect on changes that occur.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students identifying patterns in data to find missing values. They predict outcomes to continue patterns. They manipulate the quantity of data and reflect on changes that occur.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 4. Developing and Using Abstractions</i></p> <ol style="list-style-type: none"> <li>1. Extract common features from a set of interrelated processes or complex phenomena.</li> </ol>

Strand	Algorithmic Thinking and Programming
Topic	Algorithms
<p><b>ATP.A.5.a</b> Evaluate a multi-step process to diagram the proper steps to solve a problem.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students refined an algorithm to accomplish a given task. In grade 5, students compare and refine algorithms with a focus on the end result. In grade 6, students will evaluate a multi-step process to diagram the proper steps to find the most efficient solution.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• An algorithm is a series of steps to complete a process or task</li> <li>• Once algorithms are created and written, they need to be tested and possibly revised based on the results</li> <li>• Pseudocode and flowcharts can be used to create and modify an algorithm</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Utilize logical patterns of progression within an algorithm to modify and refine the algorithm to efficiently accomplish a given task</li> <li>• Utilize pseudocode and flow charts to assist with communicating, creating and modifying an algorithm to accomplish a given task</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Students will utilize processes of computational thinking (i.e., logical thought) to sort through, identify errors, and modify algorithms. They will need to utilize communication techniques (i.e., pseudocode, flowcharts) in order to document the potential errors and solutions.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students determining the necessity of decomposition, abstraction, modification, and reassembly of the algorithm with an emphasis on the resulting algorithm. Students should utilize communication strategies to further refine their algorithm.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 3. Recognizing and Defining Computational Problems</i></p> <p>2. Decompose real-world problems.</p>

<b>Strand</b>	<b>Algorithmic Thinking and Programming</b>
<b>Topic</b>	<b>Algorithms</b>
<b>Strand</b>	<b>Algorithmic Thinking and Programming</b>
<b>Topic</b>	<b>Variables and Data Representation</b>
<p><b>ATP.VDR.5.a</b> Create a variable, a placeholder for storing a value, to understand how it is used in a multi-step process (i.e., algorithm).</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students expanded on defining and identifying variables. In grade 5, students create variables to store and modify data. In grade 6, students will identify unknown values that need to be represented by a variable within a multi-step process.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Variables are placeholders for values that can be used in an algorithm</li> <li>• Data can be stored in the variable</li> <li>• Variables can represent multiple pieces of information from multiple lines</li> <li>• Coding language places the variable at the front of the algorithm</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Use logical variable representations (i.e., letter or symbol)</li> <li>• Write or edit an algorithm that substitutes a variable for a value</li> <li>• Edit the variable to show how it changes the algorithm's result</li> <li>• Determine if a variable is needed within an algorithm</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Symbols such as letters are used in programming to hold values. Students need to learn that the syntax (i.e., the order of symbols in the equation) may impact the success of a program. Students can explore what happens when the data stored in a variable is changed. For example, using a repetitive nursery rhyme (e.g., Five Little Monkeys), students can create a variable to change the number of monkeys. Here, the changing value is the number of monkeys.</p> <p>Students are not expected to only use the formal terms of "variable" and "algorithm."</p>

Strand	Algorithmic Thinking and Programming
Topic	Algorithms
	<p><b>CONTENT FOCUS</b></p> <p>The focus is on students being able to define and identify variables as symbols such as letters and understand how they are used in algorithms to store data. Students should begin using variables within equations. Students should explore how variables store data and modify equations.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 4. Developing and Using Abstractions</i></p> <ol style="list-style-type: none"><li>1. Extract common features from a set of interrelated processes or complex phenomena.</li></ol>

Strand	Algorithmic Thinking and Programming
Topic	Control Structures
<p><b>ATP.CS.5.a</b> Create a program using sequences, events, loops and conditionals to solve a problem.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students refined their programming skills using established structures, such as loops and conditionals. In grade 5, students apply these new skills in increasingly complex ways and will continue to refine these to work towards programming efficiency. In grade 6, students will identify decisions and loops in programs to solve problems.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Loops are statements that repeat and make programming more efficient for the computer and the programmer</li> <li>• Conditionals are typically in the form of "if/then" statements and enable the program to follow different paths</li> <li>• Events are structures that programmers can use to explain how the program will react when the user interacts</li> <li>• Proper sequencing of steps within the program ensures efficiency</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Insert a loop in a program in order to avoid typing a command several times</li> <li>• Insert a conditional in a program in order to make the program more powerful by creating several paths (if/then or if/then/else)</li> <li>• Create an event in the format "When (action), then (result) occurs"</li> <li>• Diagram the flow of a program to demonstrate the sequence of its events and products</li> <li>• Combine statements within other statements (nesting) to make compound statements</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Loops can occur in programming by having the robot or pen repeat a motion several times, such as going forward ten paces and then turning thirty degrees. In an algorithm, students can program to have a number added several times.</p>

Strand	Algorithmic Thinking and Programming
Topic	Control Structures
	<p>Conditionals occur in a program by inserting a command to complete when a condition is met. For instance, if a condition states "If n=5," when the value n=5 is achieved, then the program will execute the command given.</p> <p>Events can be thought of as an action as a result of an action. Such as, "When I click the mouse, the image rotates."</p> <p>Sequencing of events and commands is an important part of programming when creating a program from scratch or remixing an existing one.</p> <p>Students can diagram or describe the steps of a program using a flowchart or other graphic organizer.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on using a loop to eliminate several redundant commands, using a conditional to add complexity to a program and to program efficiently, creating an event in the format "When (action), then (result) occurs," and diagraming or describing the flow of a program. The complexity of the loops, conditionals, events, and sequences continues to increase from the prior grade level.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 4. Developing and Using Abstractions</i></p> <ol style="list-style-type: none"> <li>1. Extract common features from a set of interrelated processes or complex phenomena.</li> </ol>

Strand	Algorithmic Thinking and Programming	
Topic	Modularity	
<p><b>ATP.M.5.a</b> Decompose (i.e., break down) the steps needed or not needed (i.e., abstraction) into precise sequences of instructions to design an algorithm.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students refined the decomposition, abstraction and algorithm creation process. In grade 5, students begin to use abstraction to further refine and design an algorithm. In grade 6, students will utilize decomposition, abstraction, modification and creation of an algorithm to accomplish a given task.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>Modularity refers to components of a program that complete a procedure or task. Modules within a program may need to be evaluated, refined, and/or copied</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>Regroup or redesign sets of a decomposed algorithm in order to modify the result of the algorithm in the most efficient manner possible</li> <li>Determine if the logic of an algorithm requires decomposition, abstraction, modification to efficiently accomplish a given task</li> <li>Utilize pseudocode and flow charts as related to the algorithm</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Processes of logical thought should include dissection of a whole to its parts. Solving smaller sections of a larger equation to determine its functionality toward the end goal. Ensure that sets of instructions include all needed parts to modify the result to reach the end goal. These instructions can be written in code, pseudocode, real language or flowcharts related to the language of the algorithm.</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students utilizing processes of logical thought, decomposing the algorithm and abstracting, modifying, and reassembling it to accomplish a given task in the most efficient means possible. Students need to utilize communication strategies to document and reduce the algorithm to the most efficient result.</p>	

Strand	Algorithmic Thinking and Programming
Topic	Modularity
	<p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 3. Recognizing and Defining Computational Problems</i></p> <ol style="list-style-type: none"><li>2. Decompose complex real-world problems into manageable subproblems that could integrate existing solutions or procedures.</li></ol> <p><i>Practice 4. Developing and Using Abstractions</i></p> <ol style="list-style-type: none"><li>3. Create modules and develop points of interaction that can apply to multiple situation and reduce complexity.</li></ol> <p><i>Practice 7. Communicating about Computing</i></p> <ol style="list-style-type: none"><li>1. Select, organize and interpret large data sets from multiple sources to support a claim.</li></ol>

Strand	Algorithmic Thinking and Programming
Topic	Modularity
<p><b>ATP.M.5.b</b> With grade appropriate complexity, modify, remix or incorporate portions of an existing program into one's own work, to develop something new or add more advanced features.</p>	<p><b>Expectations for Learning</b></p> <p><b>LEARNING PROGRESSION</b></p> <p>In grade 4, students modified and elaborated the portions of code used in their own programs. In grade 5, students use portions of code to develop something new based on a given problem. In grade 6, students will be able to identify the parts of the program they designed.</p> <p><b>IMPORTANT CONCEPTS</b></p> <ul style="list-style-type: none"> <li>• Smaller portions of code should be grouped together so the end result will complete a task. These small portions should accomplish a task from start to finish independently of any other sections of code. These sections of code can then be reused to create a new program to solve a problem</li> </ul> <p><b>KEY SKILL/PROCEDURES</b></p> <ul style="list-style-type: none"> <li>• Break down steps into repeatable chunks</li> <li>• Use chunks to repeat steps to accomplish a given task</li> <li>• Create a program using chunked code</li> </ul> <p><b>Content Elaborations</b></p> <p><b>CLARIFICATIONS</b></p> <p>Chunks of code can be grouped together, named, and used as a module (method, class, function) to build a new or modified version of a program (i.e., grouping a set of code used accomplish the task of climbing stairs into a module that can be used anytime stairs need to be climbed).</p> <p><b>CONTENT FOCUS</b></p> <p>The focus is on students using chunks of code (i.e., modules), repeating, and reorganizing them to create a new program to solve a different problem.</p> <p><b>COMPUTER SCIENCE PRACTICES</b></p> <p><i>Practice 3. Recognizing and Defining Computational Problems</i></p> <ol style="list-style-type: none"> <li>2. Decompose complex real-world problems into manageable subproblems that could integrate existing solutions or procedures.</li> </ol>
