Computer Science Model Curriculum for Grade 6

| Strand | Computing Systems | |
|--|--|--|
| Topic | Devices | |
| <p>CS.D.6.a Identify the benefits and limitations of a given computing device's functions (including individual components) to explain how the functions and components work together to create the computing system.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students learned about the internal components of a computer. By the end of 6th grade, students apply that knowledge to identify the benefits and limitations of devices. In future grades, students will evaluate devices dependent upon personal needs.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • There are benefits to the functionality of major hardware and software components of a system • Understand how changes in these components will benefit or limit the device <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Explain the limitations and benefits of devices • Explain the functionality of a component of a system (hardware/software) and describe its benefits or limitations <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Students will be able to take a particular device and know what it can or cannot do. For example, can a device connect to Wi-Fi, can you print from it, how much memory will this file take up?</p> <p>CONTENT FOCUS</p> <p>Students can determine which computing devices can be used for a particular task or to make everyday life easier.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 1. Fostering an Inclusive Computing Culture</i></p> <ol style="list-style-type: none"> 3. Employ self- and peer-advocacy to address bias in interactions, product design, and development methods | |

| Strand | Computing Systems |
|--|---|
| Topic | Hardware/Software |
| <p>CS.HS.6.a Identify ways that hardware and software work together as a system to collect and exchange data.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students evaluated the digital learning tools and devices they had chosen across curricular areas. By the end of 6th grade, students look at the ways the hardware and software components come together to collect and exchange data. In future grades, students will evaluate hardware and software components to accomplish a task.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Identify functionalities of major hardware and software components of a system • Know a basic flow and order of how the data moves through the components <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Evaluate input devices and software to determine which combination(s) will produce a proper outcome based on a request • Identify how the data is input, processed and output <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Consider multiple components, such as functionality, cost, size, speed, accessibility and aesthetics, to select the appropriate hardware or software for a given task. Understand how data moves from input to output in a system.</p> <p>CONTENT FOCUS</p> <p>Students can determine computing devices and software that should be used to create an end product and understand how the data flows through the system.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 4. Developing and Using Abstractions</i></p> <ol style="list-style-type: none"> 2. Evaluate existing technological functionalities and incorporate them into new designs. |

| Strand | Computing Systems |
|---|---|
| Topic | Troubleshooting |
| <p>CS.T.6.a Use a systematic process to identify and evaluate the source of a routine computing problem. Select the best solution to solve the computing problem and communicate the solution to others.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students worked to diagnose problems, describe the problem, and develop strategies to resolve technology issues. By the end of 8th grade, students will be able to identify and evaluate problems, determine the best solution and also communicate with others to help them solve those problems. In future grades, students will understand the troubleshooting process to evaluate a pre-determined situation.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Use a basic troubleshooting process • Have a working knowledge of computing devices • Communicate to others via electronic and/or in-person communication <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Utilize knowledge of computing devices, hardware and software to locate and solve a problem • Create a list of possible solutions to implement • Evaluate solutions to determine the best one • Communicate a solution to others <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>As students gain more experience listing possible solutions, they need to be able to test the solutions and determine the best solution. They also need to learn how to communicate these solutions to others via electronic or in-person communication to help guide others to a solution.</p> <p>CONTENT FOCUS</p> <p>Students can identify troubleshooting steps that are key to solving the software/hardware problem. This process involves collaboratively working through the troubleshooting steps.</p> |

| Strand | Computing Systems |
|--------|---|
| Topic | Troubleshooting |
| | <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 6. Testing and Refining Computational Artifacts</i></p> <ol style="list-style-type: none">1. Systematically test computational artifacts by considering all scenarios and using test cases.2. Evaluate and refine a computational artifact multiple times to enhance its performance, reliability, usability, and accessibility. |

| Strand | Networks and the Internet | |
|--|--|--|
| Topic | Networking | |
| <p>NI.N.6.a Identify the role of hardware components to understand the infrastructure of networks and the internet (including cloud servers).</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students developed a general knowledge of how information is broken down to be transmitted over a network. By the end of 6th grade, students understand the flow of information across the hardware of the internet. In future grades, students will identify specific hardware components in the infrastructure of the internet.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Devices must be connected to the internet to share information • Hardware devices are required to transfer information across the internet • Information travels from router to router across the internet • Servers retrieve (or store) information <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Explain that the internet is made up of connected devices • Explain that data travels through devices to get from one location to another on the internet <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Students should understand a simple flow diagram of how information travels from a networked computer across the internet to retrieve information.</p> <p>CONTENT FOCUS</p> <p>Students will understand that data travels through devices to get from one location to another location on the internet.</p> | |

| Strand | Networks and the Internet |
|--------|---|
| Topic | Networking |
| | <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 4. Developing and Using Abstractions</i></p> <ol style="list-style-type: none">1. Model phenomena and processes and simulate systems to understand and evaluate potential outcomes. <p><i>Practice 7. Communicating about Computing</i></p> <ol style="list-style-type: none">2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose. |

| Strand | Networks and the Internet | |
|--|---|--|
| Topic | Networking | |
| <p>NI.N.6.b Identify protocols (i.e., rules) and explain why they are used to transmit data across networks and the internet.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students developed general knowledge of how information is broken down to be transmitted over a network. By the end of 6th grade, students are able to identify that protocols are rules that define how data between devices is sent and received. In future grades, students will identify specific protocols.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Devices connected to the internet use protocols • Protocols used for websites include http and https (usage not mechanics) <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Identify the purpose of protocols • Identify the need for protocols <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Students should understand that all devices connected to the internet use protocols.</p> <p>CONTENT FOCUS</p> <p>Students will understand that hardware combined with software protocols work together to get data from one location to another location on the internet.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 4. Developing and Using Abstractions</i></p> <p>4. Model phenomena and processes and simulate systems to understand and evaluate potential outcomes</p> | |

| Strand | Networks and the Internet |
|---|---|
| Topic | Cybersecurity |
| <p>NI.C.6.a Identify cybersecurity concerns and measures needed to protect electronic information.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students had experience using and creating a password for a personal account. By the end of 6th grade, students understand the concern that electronic information needs to and can be protected. In future grades, students will learn about encryption to protect information.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Personal information is valuable information • Social media information is valuable information • Information can be protected from theft and manipulation <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Identify personal digital habits that help to protect information • Demonstrate software settings to protect information <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Students will be able to define personal information, such as birthday, address and phone number to explain why it is important that this information is protected (i.e., identify theft). In addition, students will understand what constitutes social media information and explain which information should be shared and which information should remain private.</p> <p>CONTENT FOCUS</p> <p>Students will understand that there is personal information that should be kept private for security reasons. Students need to realize not all non-private information needs to be shared via social media.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 7. Communicating about Computing</i></p> <p><i>(Content Statement aligns to Core Practice rather than specific Practice Statements).</i></p> |

| Strand | Networks and the Internet |
|--|--|
| Topic | Cybersecurity |
| <p>NI.C.6.b Identify the different types of malware to understand threats to data security.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students had experience using and creating a password for a personal account. By the end of 6th grade, students are able to identify some of the different types of malware that exist that threaten data security. In future grades, students will learn about encryption to protect information.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Obtain a general understanding of "what is a computer virus?" • Obtain a general understanding of "what is spyware?" <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Describe various computer threats, such as how malware is spread via email <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>At this level, students will be able to define effective strategies used to safeguard their personal information, such as not clicking on links in email.</p> <p>CONTENT FOCUS</p> <p>Students will be able to identify simple measures they can use to protect their personal information.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 7. Communicating about Computing</i></p> <p><i>(Content Statement aligns to Core Practice rather than specific Practice Statements.)</i></p> |

| Strand | Networks and the Internet |

| Topic | Cybersecurity |
| <p>NI.C.6.c Identify ways to protect private information.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students had experience using and creating a password for a personal account. By the end of 6th grade, students need to understand private information can be protected by individuals and by software. In future grades, students will have a deeper understanding of how information is protected.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Access rights include but are not limited to reading, writing, renaming, and deleting files • Software is available to detect and protect information • Shared files and privacy filters are a safety measure • Settings can be accessed to disable options to download and print files <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Access rights as a security measure • Identify advantages and disadvantages of safety measures <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>At this level, students deepen their understanding of security measures to safeguard online information and documents in various file formats. For example, students should be able to share documents on a shared server, understanding specific security settings.</p> <p>CONTENT FOCUS</p> <p>Students will be able to identify how specific software settings (e.g., public vs. private settings) for files can safeguard their data.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 7. Communicating about Computing</i></p> <p><i>(Content Statement aligns to Core Practice rather than specific Practice Statements.)</i></p> |

| Strand | Data and Analysis | |
|---|---|--|
| Topic | Data Collection and Storage | |
| <p>DA.DCS.6.a Identify and use an appropriate digital data collection tool to compile information.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students have explored data sets and are able to define types of data. In 6th grade, students experience collecting data with a specific tool. They develop an understanding that different tools are used to manage specific data. In future grades, students will be able to evaluate the tools that would provide the best solution.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Use different data capturing tools (e.g., electronic survey, digital thermometer, yard sticks, meter sticks) <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Identify and use different types of data collection tools that are available • Select and use the appropriate tool to collect different types of data <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Students need to experience the difference between the use of tools, such as rulers, yardsticks, meter sticks, thermometer, electronic survey, phones, computers and tablets.</p> <p>CONTENT FOCUS</p> <p>Students can collect data from individual tools or systems.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 5. Creating Computational Artifacts</i></p> <p><i>(Content Statement aligns to Core Practice rather than specific Practice Statements.)</i></p> | |

| Strand | Data and Analysis |
|--|---|
| Topic | Data Collection and Storage |
| <p>DA.DCS.6.b Select and utilize appropriate file formats to organize collected data.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, student explored files of different types and were able to differentiate the uses of the various types. By the end of 6th grade, students need to know the type of data and how it is stored and select the appropriate type of file. In future grades, students will be able to determine the limitation of various file types.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> Identify picture and text file extensions and the characteristics of these file extensions <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> Explain that not all file extensions are the same Explain the differences in the quality of the image <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Students select and utilize the correct file type for various sets of data and text.</p> <p>CONTENT FOCUS</p> <p>Students understand the difference between size and quality for various images. Students should have experience with various file formats (e.g., .docx, .GDOC, .xlsx, GSHEET .pdf, .txt, .dat, .gif, .jpg, .tiff, .png, .bmp, .bpg, and other formats).</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 5. Creating Computational Artifacts</i></p> <p><i>(Content Statement aligns to Core Practice rather than specific Practice Statements.)</i></p> |

| Strand | Data And Analysis |
|--|--|
| Topic | Data Collection and Storage |
| <p>DA.DCS.6.c Utilize a file structure to logically organize data to support individual and collaborative work.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, student had experience saving files to a school or portable device. By the end of 6th grade, students know how to organize data, save files and access files, including shared files, on different mediums. In future grades, students will provide more logical structure for storing files.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> Files can be shared Documents can be organized in folders and subfolders on a hard drive or cloud <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> Utilize procedures for how to share file(s) with others Explain the importance of files being separated into folders and subfolders based on content Demonstrate how to follow directions to organize files into folders and subfolders <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Students need to be able to organize their files within logical structures. (e.g., A contextual example would be using a file cabinet to store folders, notebooks, and papers.) Put folders inside of folders that are labeled appropriately.</p> <p>CONTENT FOCUS</p> <p>Students can store files in a system where they can be located at a later time. Students should be able to locate files on the hard drive or cloud.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 5. Creating Computational Artifacts</i></p> <p><i>(Content Statement aligns to Core Practice rather than specific Practice Statements.)</i></p> |

| Strand | Data and Analysis |

| <p>DA.VC.6.b Create a spreadsheet utilizing formulas, functions and graphs to represent and analyze data.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, student analyzed graphs in classes. By the end of 6th grade, students recognize that a graph can be created from data using a spreadsheet. In future grades, students will be able to utilize formulas and functions.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Graphs are a representation of data • Formulas and functions are used to represent data <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Explain that data can be used to draw conclusions <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Given a data set, students will construct a graphical representation.</p> <p>CONTENT FOCUS</p> <p>Students will be able to recognize pie charts, bar graphs, histograms and other data models. Students will find statistical results, such as mean, median, mode, percentage and degrees in a circle.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 7. Communicating about Computing</i></p> <ol style="list-style-type: none"> 1. Select, organize, and interpret large data sets from multiple sources to support a claim. <p><i>Practice 5. Creating Computational Artifacts</i></p> <ol style="list-style-type: none"> 2. Create a computational artifact for practical intent, personal expression, or to address a societal issue. |

| Strand | Data and Analysis |
|---|---|
| Topic | Inference and Modeling |
| <p>DA.IM.6.a Identify and utilize data sets to support or refute a hypothesis.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students should have had experience analyzing data models (e.g., charts, graphs). By the end of 6th grade, students are able to provide evidence to support or refute a prediction about a collection of data. In future grades, students will be able to hypothesize about self-generated data.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Develop a hypothesis (a prediction) for a problem and then determine if the data collected around the problem supports the hypothesis <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Given a problem statement, students will be able to create a hypothesis (prediction), collect data (e.g., survey results), analyze a data set and compare the analysis to the hypothesis <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>Students will be given a problem statement and asked to create a hypothesis, collect data, organize the results in an electronic tool, and support or disprove the hypothesis.</p> <p>CONTENT FOCUS</p> <p>Students will understand what type of data would be appropriate to help analyze a problem. They should then be able to complete the processes necessary to support or disclaim a hypothesis.</p> <p>COMPUTER SCIENCE PRACTICES</p> <p><i>Practice 7. Communicating about Computing</i></p> <ol style="list-style-type: none"> 1. Select, organize, and interpret large data sets from multiple sources to support a claim. |

| Strand | Algorithmic Thinking and Programming |
|--|---|
| Topic | Algorithms |
| <p>ATP.A.6.a Compare and refine multiple algorithms for the same task to determine which is the most efficient.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students have had experience developing an algorithm for a simple process. At the end of 6th grade, students should be able to choose an algorithm for a multi-step process and evaluate multiple algorithms to determine the most efficient solution. In future grades, students will be able to create algorithms for the most efficient solution.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Understand the flow of a program • Compare different sets of pseudocode and determine the most efficient solution <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Identify the inputs, outputs, processes and decisions <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>An algorithm is a series of instructions to obtain a desired result. One example could be a set of directions to travel from the school to the pizza shop or the process of calculating a nine weeks grade. Comparing algorithms can be comparing different set of directions between two locations; all sets of directions end at the same location but one set may be shorter, safer, or have fewer turns. This would be analyzing the algorithms to determine which one is more efficient where efficiency is not necessarily the "fastest" path.</p> <p>CONTENT FOCUS</p> <p>An algorithm is a series of instructions to obtain a desired result. One example could be a set of directions to travel from the school to the pizza shop or the process of calculating a nine weeks grade. | Topic | Modularity |
| <p>ATP.M.6.a Decompose problems into parts to facilitate the design, implementation and review of programs.</p> | <p>Expectations for Learning</p> <p>LEARNING PROGRESSION</p> <p>In previous grades, students began to use abstraction to further refine and design an algorithm. By the end of 6th grade, students are able to identify and utilize the procedures/modules within a set of instructions or code. In future grades, students will continue to identify and utilize the procedures/modules within a set of text-based instructions or code.</p> <p>IMPORTANT CONCEPTS</p> <ul style="list-style-type: none"> • Identify smaller components of an algorithm • Identify a set of steps of an algorithm's component that produces a result <p>KEY SKILL/PROCEDURES</p> <ul style="list-style-type: none"> • Group and organize steps that work together to produce a result • When provided with an end result, identify the steps that were used <p>Content Elaborations</p> <p>CLARIFICATIONS</p> <p>A procedure is a module (a group of instructions within a program) that performs a particular task. Procedures are invoked to repeat groups of instructions. For example, a procedure, such as one to draw a circle, involves many instructions, but all of them can be invoked with one instruction, such as draw Circle. Procedures that are defined with parameters are generalizable to many situations and will produce different outputs based on a wide range of inputs (arguments). (K-12 Computer Science Framework, 2016)</p> <p>CONTENT FOCUS</p> <p>Students will utilize modules to increase the organization of code, the ability to hide details and the reusability.</p> |
