

# CAREER-TECHNICAL EDUCATION COLLEGE CREDIT PLUS ASSESSMENT

Students taking career-technical education (CTE) courses through College Credit Plus (CCP) may use their course grade as evidence of technical skill attainment instead of taking the WebXam for the course. An A or B in the CCP CTE course will equate to an Advanced score on the WebXam; a grade of C in the CCP CTE course will equate to a Proficient score on the WebXam. A course grade of D or F will equate to a Not Proficient score on the WebXam. If a student takes the WebXam and a CCP course grade is reported, the higher outcome will be used to calculate technical skill attainment passage for the pathway.

When replacing WebXams, districts should report CCP course grades as CTE technical assessments using a score of A, P or N, with Score Not Report Reason element of “X - value in score field represents student’s proficiency”. The test scores reported should align to the student’s CCP course grades.

<i>College Credit Plus Course Grade</i>	<i>WebXam Score Reported</i>
A	A – Advanced
B	A – Advanced
C	P - Proficient
D	N – Not Proficient
F	N – Not Proficient

For example, a student who received a B in a CCP Hydraulics and Pneumatics course, subject code 010225, would be reported as having scored advanced on the aligned WebXam, subject code ABA5, with a score of “A” and a Score Not Reported Reason of “X”.

The Department will use the average score of students scoring advanced or proficient on the WebXam, as reported, as the course-level WebXam score in the calculation of the pathway score.

For more information on assessment reporting please reference the Student Assessment (FA) record of the current EMIS manual:
