Assistant
Professor

Language and literacy development in young bilinguals

Our team

Transdisciplinary collaborators:

Kathleen Durant, KSU

Javier Jasso, OSU

John Grinstead, OSU

Ashley Adams Sanabria, SDSU

Elizabeth Pena, UC Irvine

Practitioners in SLP, school psychology, and education:

Abi Mendez, Rossana Torres, Aura Vargas,

Current funding sources:

National Institutes of Health, Grant R21DC019996 (PI: Pratt)

Institute of Educational Sciences, Grant R305A210136 (PIs: Peña & Sanabria, Co-I: Pratt)

Past funding sources:

Department of Education, Language, Evaluation, and Development in Educational Research (Training fellow)

Ohio State Presidential Dissertation Fellowship

Department of Education, Literacy Training Fellowship (Training fellow)

Outline

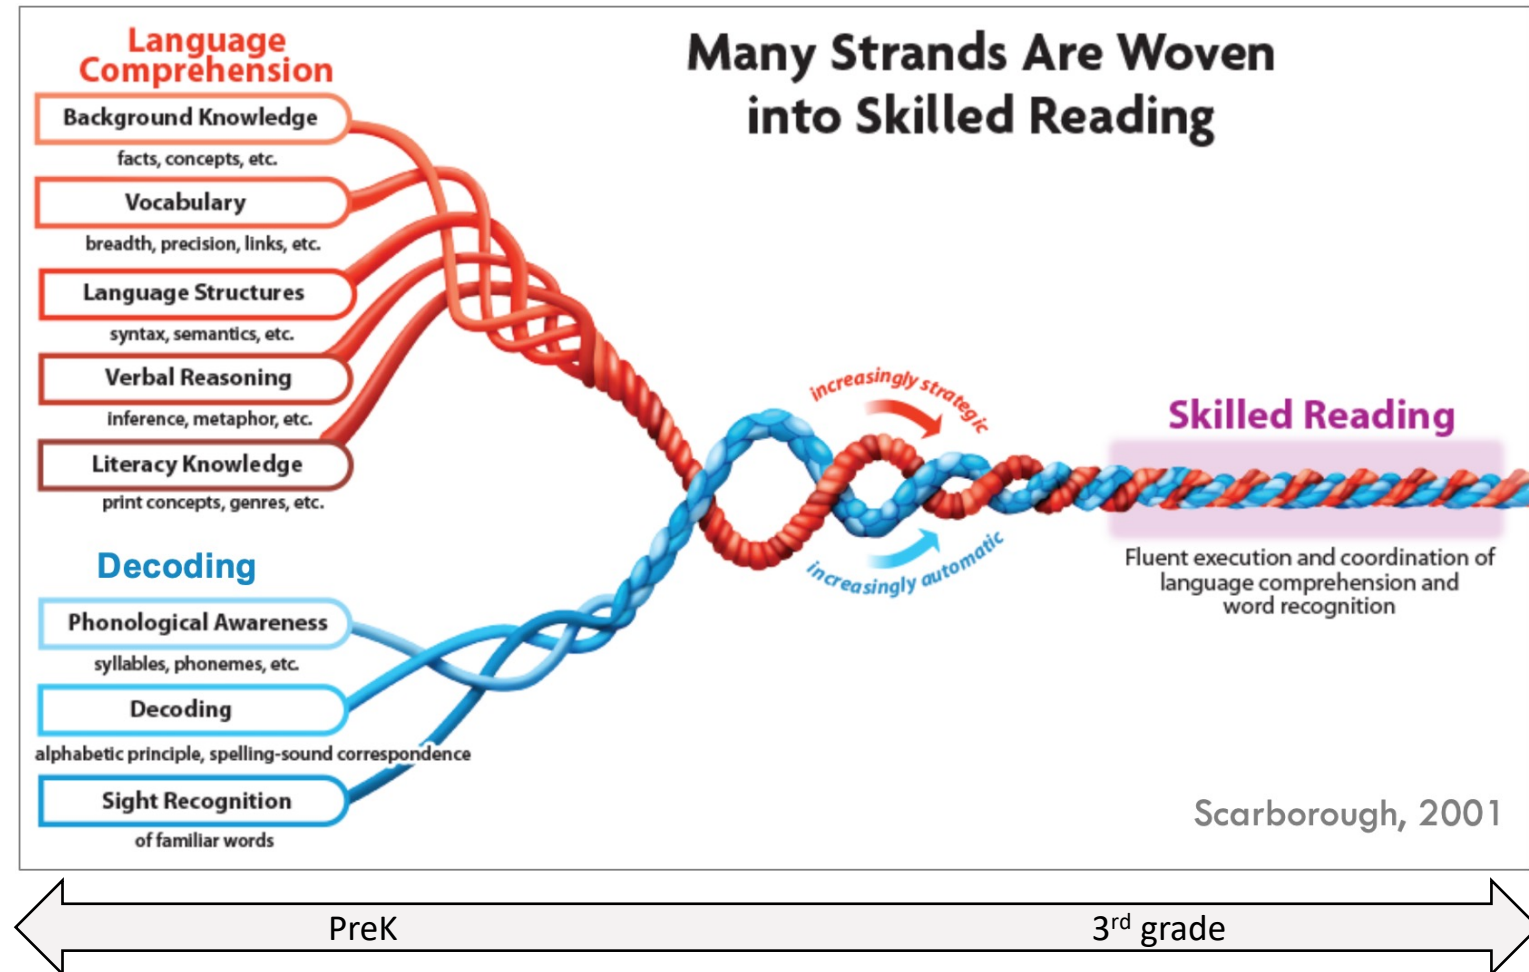

1. Review the language and literacy skills that are predictive of skilled reading; discuss special considerations for bilinguals (20 mins)
2. Describe possible follow-up measures and summary data (30 mins)
3. Putting it all together (15 mins)
4. Questions and discussion (10 mins)

Background on dyslexia x ELs

Scarborough's Rope

Individual strands of rope represent the skills that

- (a) develop in early childhood
- (b) Are predictive of reading success vs. difficulty

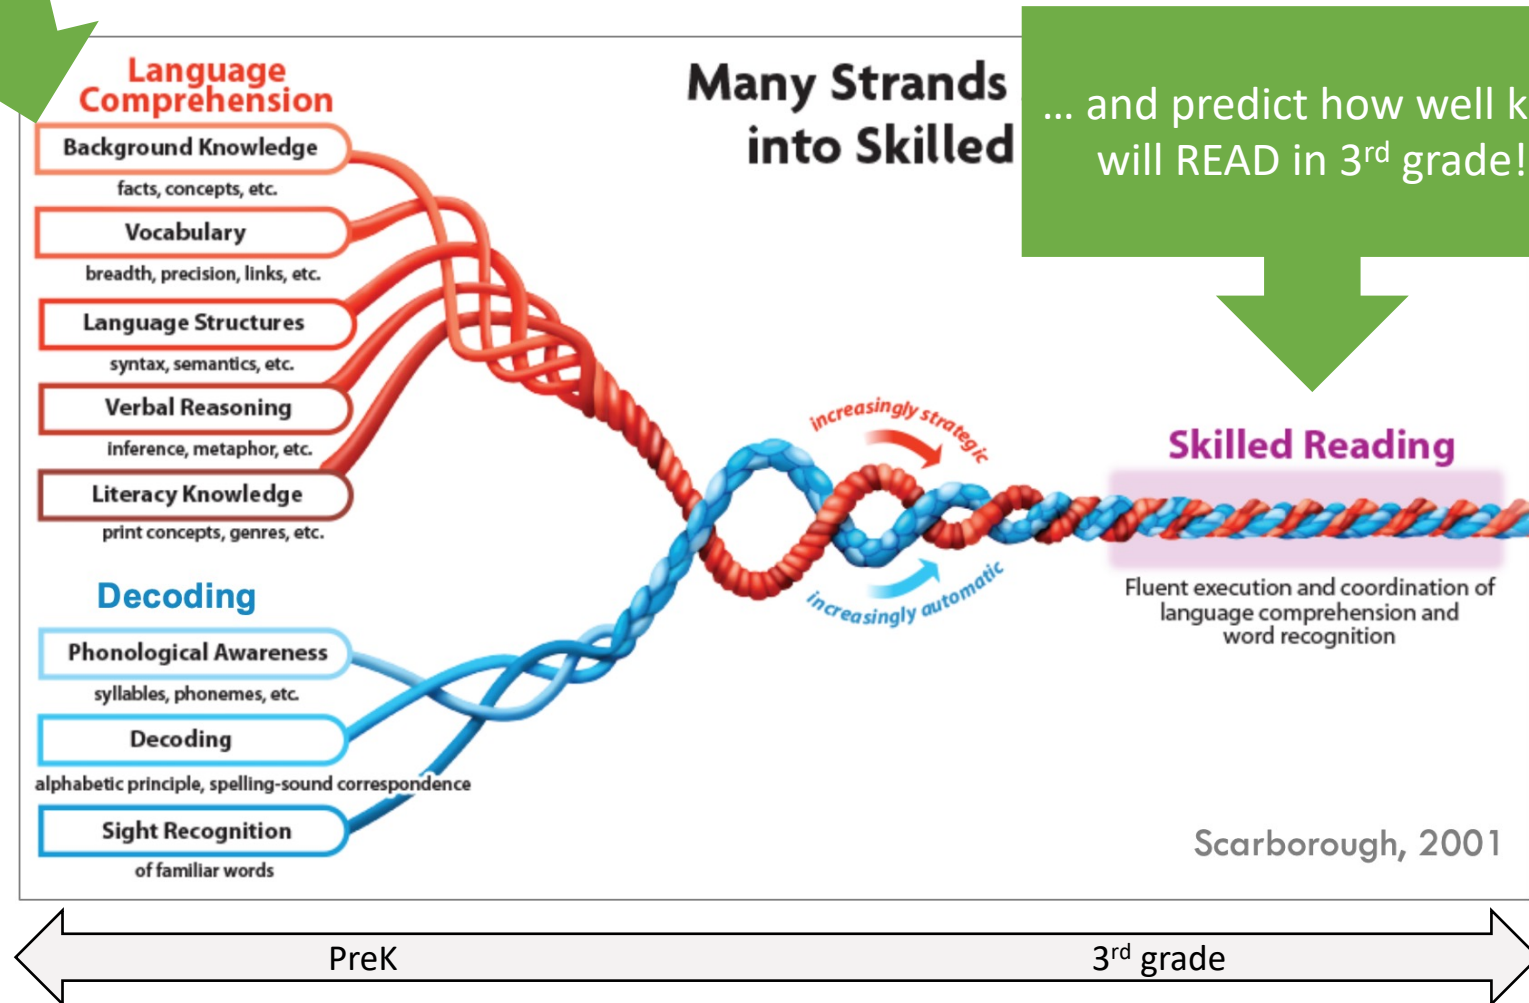

Scarborough's Rope

We can measure THESE SKILLS in kindergarten...

Individual strands of rope represent the skills that

- (a) develop in early childhood
- (b) Are predictive of reading success vs. difficulty

Reading *dis*-ability

Two broad types of skills:

1. Language-based skills
2. Code-based skills

Dyslexia

From Ohio (ORC 3323.25):

“A specific learning disorder that is **neurological** in origin and that is characterized by unexpected difficulties with accurate or fluent word recognition and by poor spelling and decoding abilities not consistent with the person’s intelligence, motivation, and sensory capabilities, which difficulties typically result from a **deficit in the phonological component of language.**”

~ 15% prevalence;

~ 3 kids in a class of 20 students

Characteristics of Tier 1 Dyslexia Screening

- Administered in English
- Focus on early **code-based literacy** skills
 - ✓ Phonemic awareness
 - ✓ Letter naming
 - ✓ Letter-sound correspondence
 - ✓ Real and non-word reading
- These are skills that require **explicit and systematic** instruction
 - i.e., just being around text is not enough for most child to learn to read
 - Reading is a relatively new human skill
- Heavily **experience-dependent**

Skills Measured by Universal Screening (Tier 1 Dyslexia Screening)

Skill to screen	Grade			
	K	1	2	3-6
Phonemic Awareness	X	X		
Letter Naming	X	X		
Letter-Sound Correspondence	X (starting in midyear)	X	X (through beginning of 2nd)	
Real and non-word reading	X (end of year only and only non-words)	X (starting in midyear)	X (non-words through beginning of 2nd)	
Oral Text Reading Accuracy and Rate		X (starting in midyear)	X	X
Comprehension				X

From Ohio's Dyslexia Guidebook, p. 26

WHAT ABOUT ENGLISH
LEARNERS?

English Learners in Ohio

English Learners in Ohio are identified using 2-step process:

Step 1: Language Usage Survey

Step 2: Ohio English Language Proficiency Screener (OELPS)

Ohio public schools serve over 80,000 students who are ELs

Less than 2% of Ohio's ELs are on IEPs for Specific Learning Disability or Speech/Language

Ohio | Department of Education

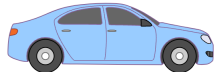

Spanish | Apéndice A: Encuesta de uso del lenguaje

Padres y tutores: Sólo complete esta página de la encuesta. El reverso de este formulario lo completará la escuela. Se requiere una encuesta de uso del idioma completa para todos los alumnos al momento de la inscripción en las escuelas de Ohio. Esta información servirá para que el personal de la escuela sepa si necesitan verificar el dominio de inglés de su hijo/a. Las respuestas a estas preguntas aseguran que su hijo/a reciba los servicios educativos necesarios para tener éxito en la escuela. La información no se usa para identificar condición de inmigración.

Nombre del alumno: (nombre y apellido)		Fecha de nacimiento del alumno: (mm/dd/aaaa)	
Preferencias de comunicación Indique su preferencia de idioma para que podamos proveer un intérprete o documentos traducidos sin costo cuando los necesite. Todos los padres tienen derecho a obtener información sobre la educación de sus hijos en un idioma que entiendan.		1. ¿En qué idioma(s) preferiría su familia comunicarse con la escuela? _____	
Antecedentes del idioma La información sobre los antecedentes del idioma de su hijo/a nos ayuda a identificar a los alumnos que cumplen las condiciones para recibir apoyo para desarrollar las habilidades lingüísticas necesarias para tener éxito en la escuela. Puede ser necesario realizar pruebas para determinar si se necesitan apoyos para aprender el idioma.		2. ¿Qué idioma aprendió primero su hijo/a? _____ 3. ¿Qué idioma usa más su hijo en casa? _____ 4. ¿Qué idiomas se usa _____	
Educación previa Las respuestas sobre el país de nacimiento de su hijo/a y la educación anterior nos brindan información sobre los conocimientos y habilidades que su hijo está trayendo a la escuela y pueden permitir que la escuela reciba fondos adicionales para apoyar a su hijo/a.		5. ¿En qué país nació su hijo/a? _____ 6. ¿Ha recibido su hijo/a <input type="checkbox"/> Sí <input type="checkbox"/> No En caso afirmativo, ¿

From Ohio's Dyslexia Guidebook, p. 26

Let's reflect...

M	d	i	C
s	a	P	k
V	r	T	o

gid	seb	vad	mig
------------	------------	------------	------------

Why might these test items be difficult for ELs?

Heavily influenced by:

- Language exposure (Farver et al., 2013)
- Classroom instruction (Galloway & Lesaux, 2017)
- Home environment (Samuelsson et al., 2005)
- Socioeconomic status (Bojczyk et al., 2019)

Let's reflect...

M	d	i	C
s	a	P	k
V	r	T	o

Being multilingual does **NOT** put you at greater risk for dyslexia!

gid	seb	vad	mig
-----	-----	-----	-----

ELs x Literacy

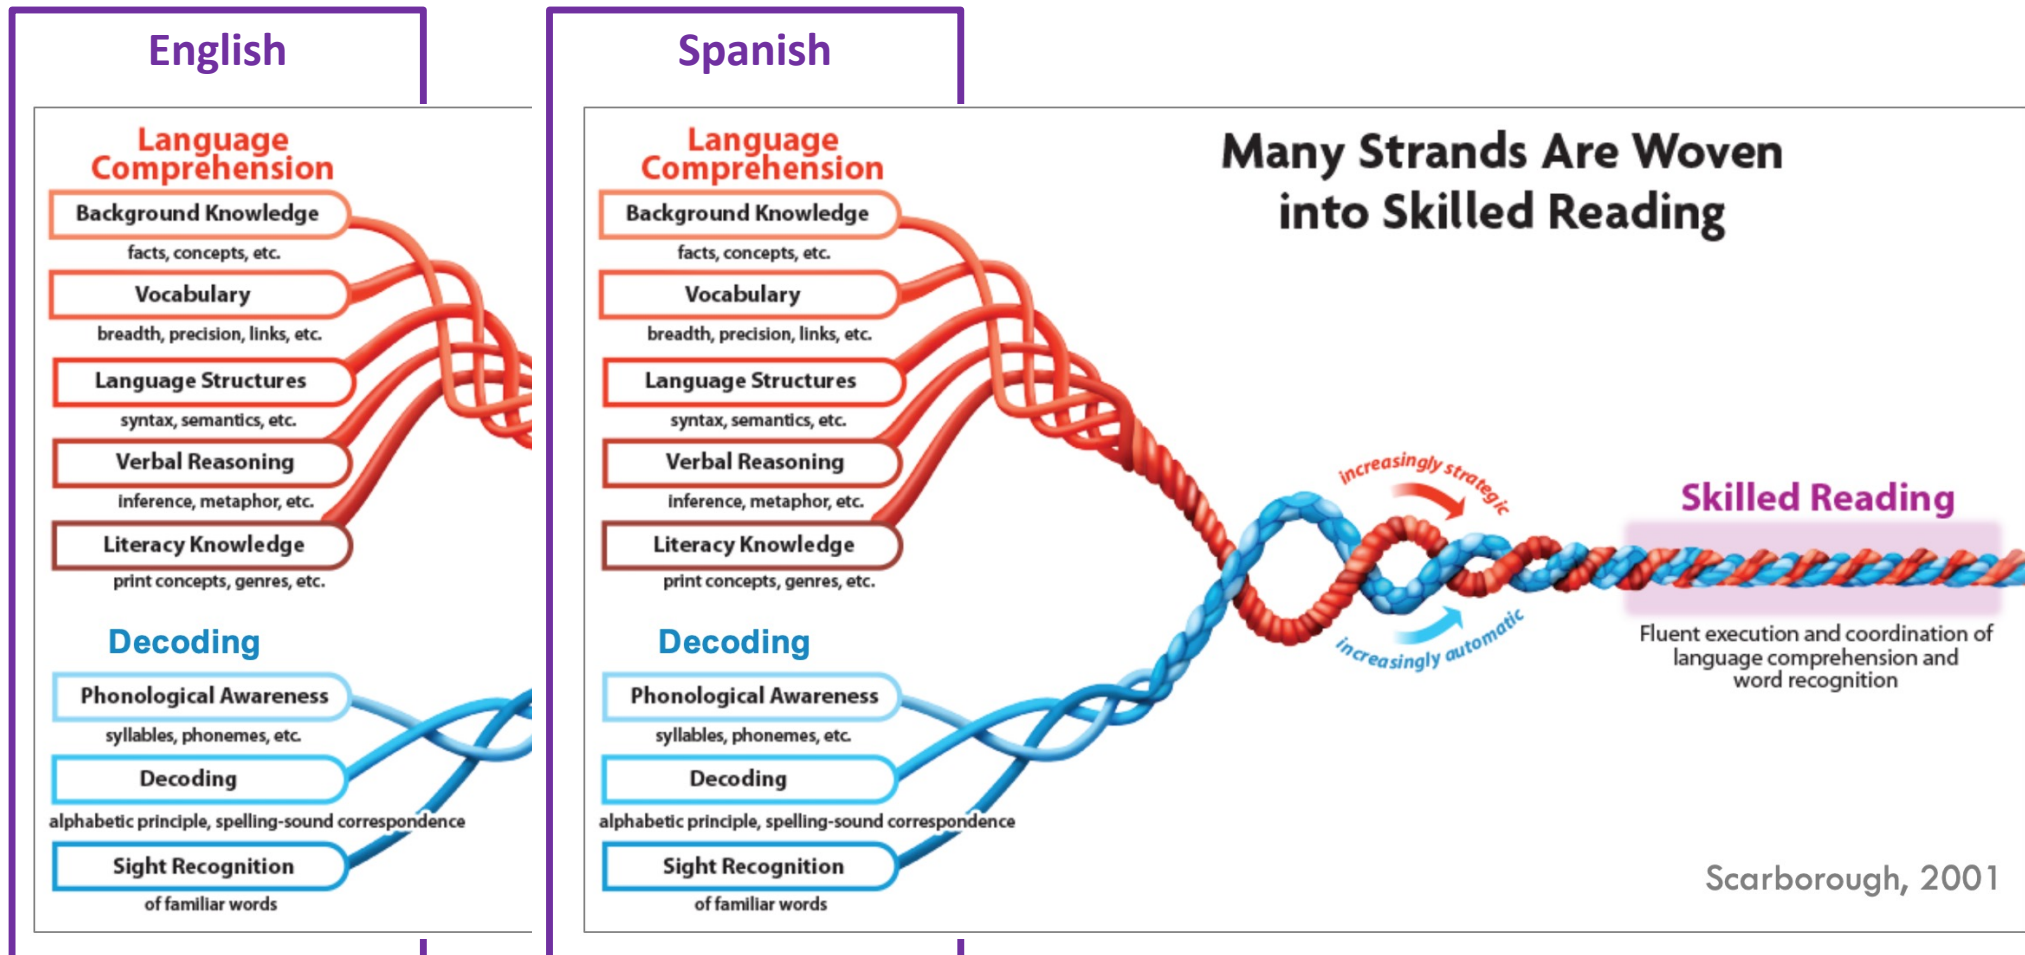

- ELs' language- and code-based skills will be divided across their languages—but often not in a balanced way!

Science-related vocabulary may be stronger in English;
Home-related vocabulary may be stronger in Spanish.

Letter names may be stronger in English;
Phonological awareness may be stronger in Spanish.

Scarborough's Rope with bilinguals

ELs x Disability

- ELs are **NOT more likely** (or less likely!) to have a neurodevelopmental disorder than a monolingual child
 - Socioeconomic (low SES, low parental education) and geopolitical factors (limited access to formal education, limited support) that often co-exist with EL status may influence test performance
- If a multilingual student has a disorder, that **disorder will be present in all the languages** the student uses
 - However, it may manifest differently depending on the characteristics of the two languages
- Reducing the number of languages a student is exposed to **will NOT cure** their disability

Source: fMRI images published in Peyrin et al. (2011) in *Brain Lang.*

Dyslexia in ELs

Being exposed to more than one language should **not impact** the prevalence of dyslexia

- But...what do we see in practice?

0.3% of ELs in Ohio are on IEPs for specific learning disability and 1.7% of ELs in Ohio are on IEPs for speech and language

(Source: U.S. Department of Education, ED Facts Data Warehouse (EDW): "IDEA Part B Child Count and Educational Environments Collection," 2020-21)

Ideally, 15% of ELs in Ohio who struggle to learn to read would be accurately diagnosed with dyslexia

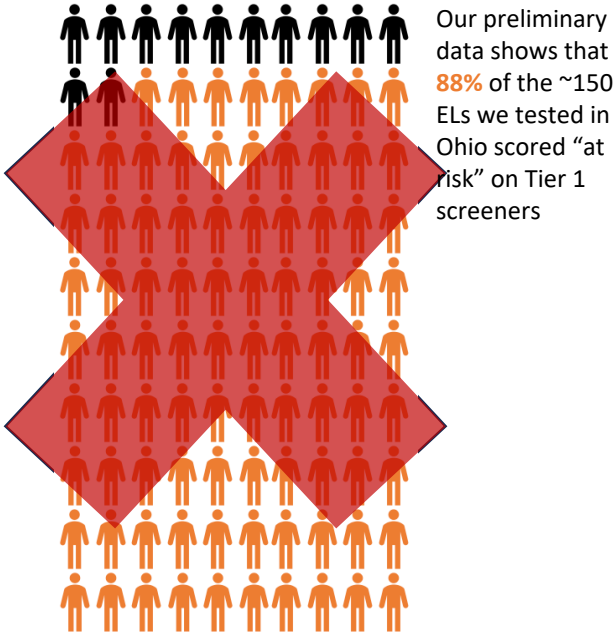

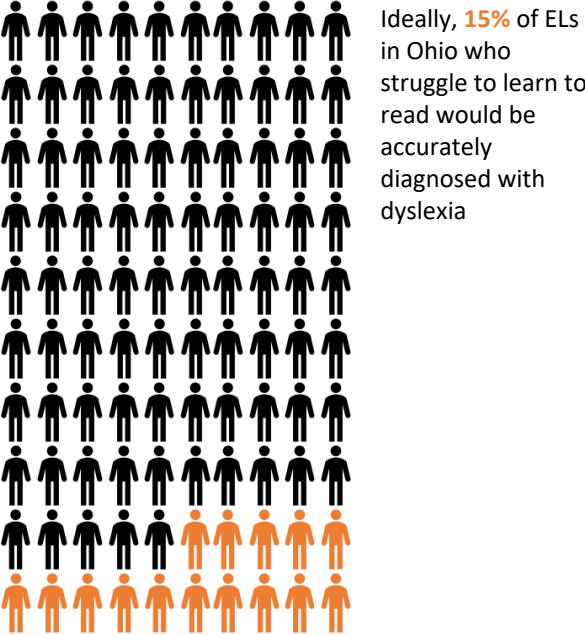

Our preliminary data shows that 88% of the ~150 ELs we tested in Ohio scored "at risk" on Tier 1 screeners

Dyslexia in ELs

Being exposed to more than one language should not impact the prevalence of dyslexia

- But...what do we see in practice?

Tier 1 Screening Results

Data collected in Fall/Winter 2023-24

2 public school districts in OH

ELs in grades K-3rd

The red line signifies the cut point for reading risk

>80% of ELs scored in the “at risk” range

Tier 1 Screening Results

- Data collected in Fall/Winter 2023-24
- 2 public school districts in OH
- ELs in grades K-3rd
- The red line signifies the cut point for reading risk
- >80% of ELs scored in the “at risk” range

Our challenge is:

How can we disentangle which of the at-risk children actually have dyslexia *versus* which have been over-identified?

Strategies for
disentangling dyslexia
within language
difference

STEP 1:

Gather information about language and literacy opportunities

- When was the student first exposed to English?
- What language(s) does the student currently hear in their environment?
 - How much of each?
- How much literacy instruction has the student received in English?
 - Was that instruction scaffolded so that the student could access it?
- How much literacy instruction has the student had in their home language?
- What opportunities for literacy are there in the home?
 - Home inventory of books, media, etc.
- What do I know about mom/dad's level of formal education?

CECER-DLL Child and Family Questionnaire

16

The next questions are about activities you and your family may do with [CHILD] to teach him/her about school related concepts. Once again, we do not expect that every activity takes place in your home.

K2. NOTE: DO NOT ASK LANGUAGE QUESTIONS FOR ACTIVITIES OCCURRING 'RARELY OR NEVER'. IF 'RARELY OR NEVER', FILL IN 'N/A' FOR LANGUAGE.

How often do you or your family...

	5-7 days a week	3-4 days a week	1-2 days a week	1-3 times a month	Rarely or Never	What languages do you or your family typically use?			
						Spanish	English	Both	N/A
a. talk with [CHILD] about the names of colors?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. talk with [CHILD] about the names of shapes?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. teach [CHILD] to count objects? For example, "Here are two plates. Please bring me three spoons."	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. teach [CHILD] to say the numbers from 1 to 10 or higher? For example, "1, 2, 3, 4, 5, ..."	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
e. practice saying the ABCs with [CHILD]? For example, "A, B, C, D, E, F, G."	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
f. teach [CHILD] about letters? For example, the names of letters in his/her name or the sounds that letters stand for.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
g. color or do an art activity with [CHILD]?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Free online, research-backed questionnaires in English and Spanish via Developing Language and Literacy Lab (DLL-Lab) Hammer et al., 2015.

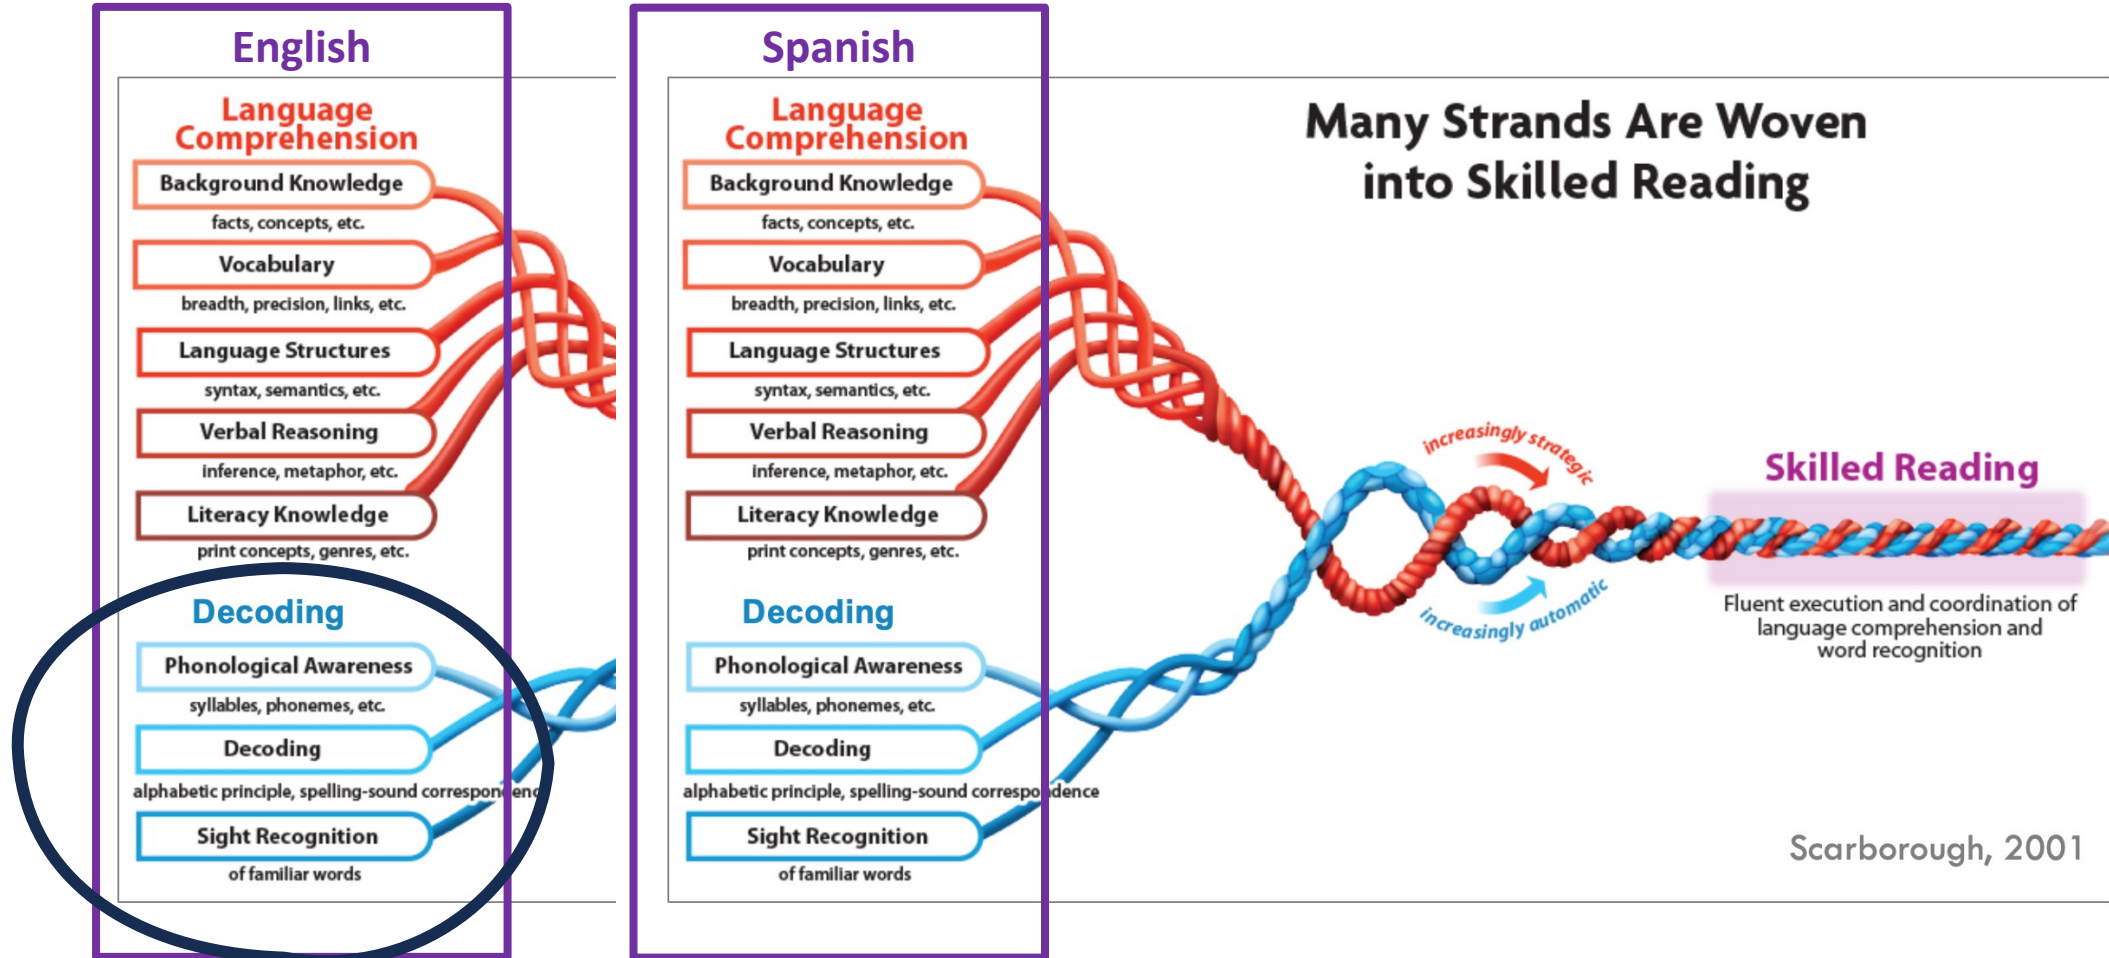

<https://www.tc.columbia.edu/dll-lab/cecer/>

Steps:

1. Gather information about language and literacy-learning opportunities
 2. Consider student's reading skills in the home language
 3. Consider the code-based skills that underlie reading
 4. Consider the language-based skills that underlie reading
- 

STEPS 2-4:

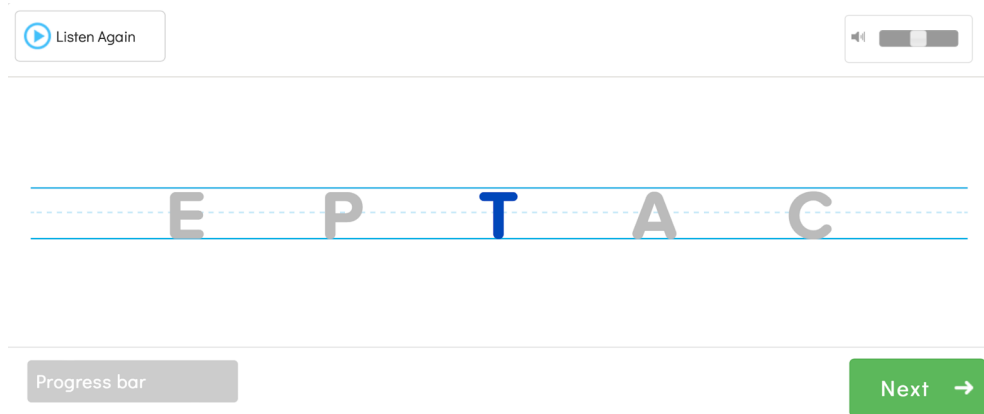

Consider which follow-up assessments to administer

STEP 2:

Consider students' reading skills in the home language

Students completed a self-administered computer-adaptive test that measures early decoding skills in Spanish.

Listen Again

E P T A C

Progress bar

Next →

“¿Qué letra dice /t/ como taco?”

The correct response is **T**.

Escuchar otra vez

du da ri ge de

Barra de progreso

Next →

”Encuentra la sílaba que dice /de/ como in la palabra dedo?”

The correct response is **de**.

Diagnostic Assessment Histograms

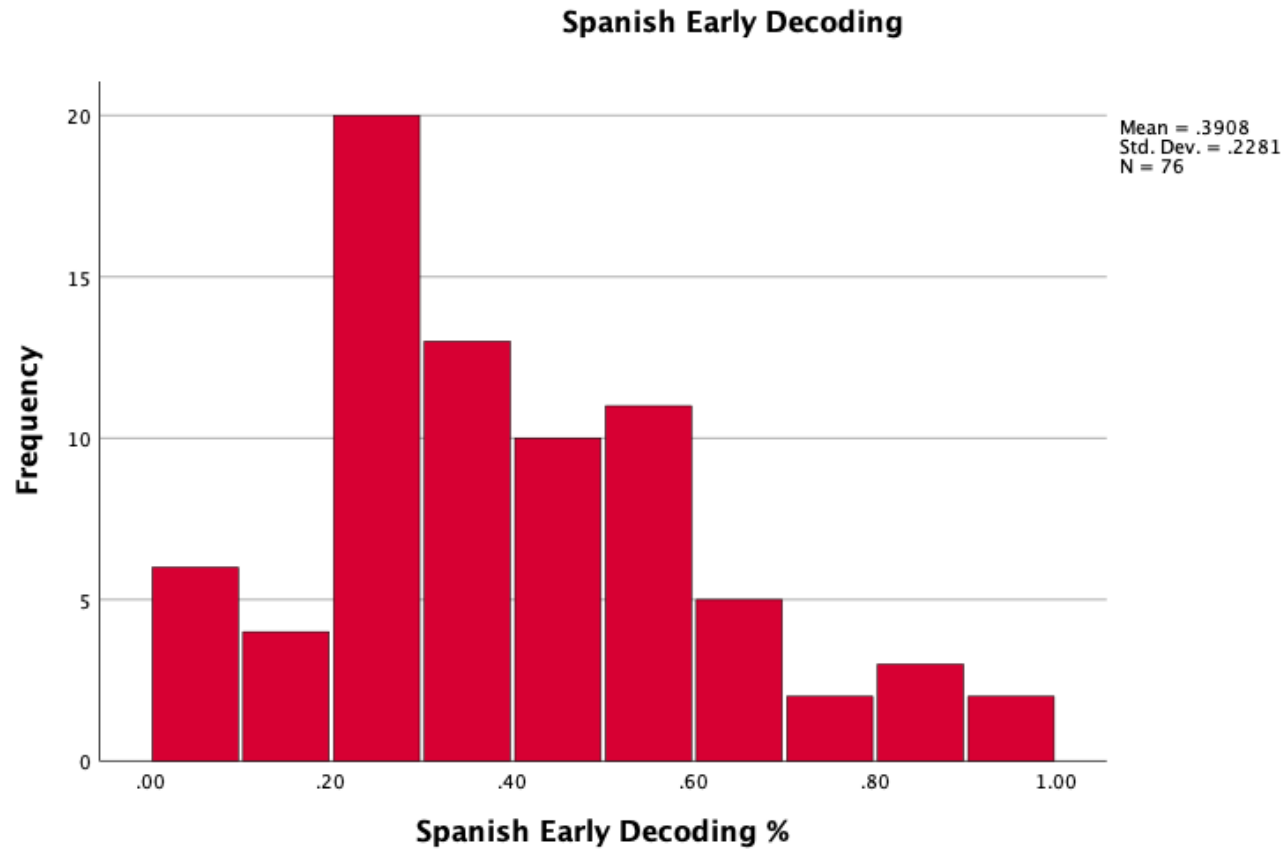

Sensitivity = 100%

The percentage of children with a disability that the test accurately identifies as having a disability

Specificity = 100%

The percentage of children with TD that the test accurately identifies as having TD

Results: Spanish Decoding

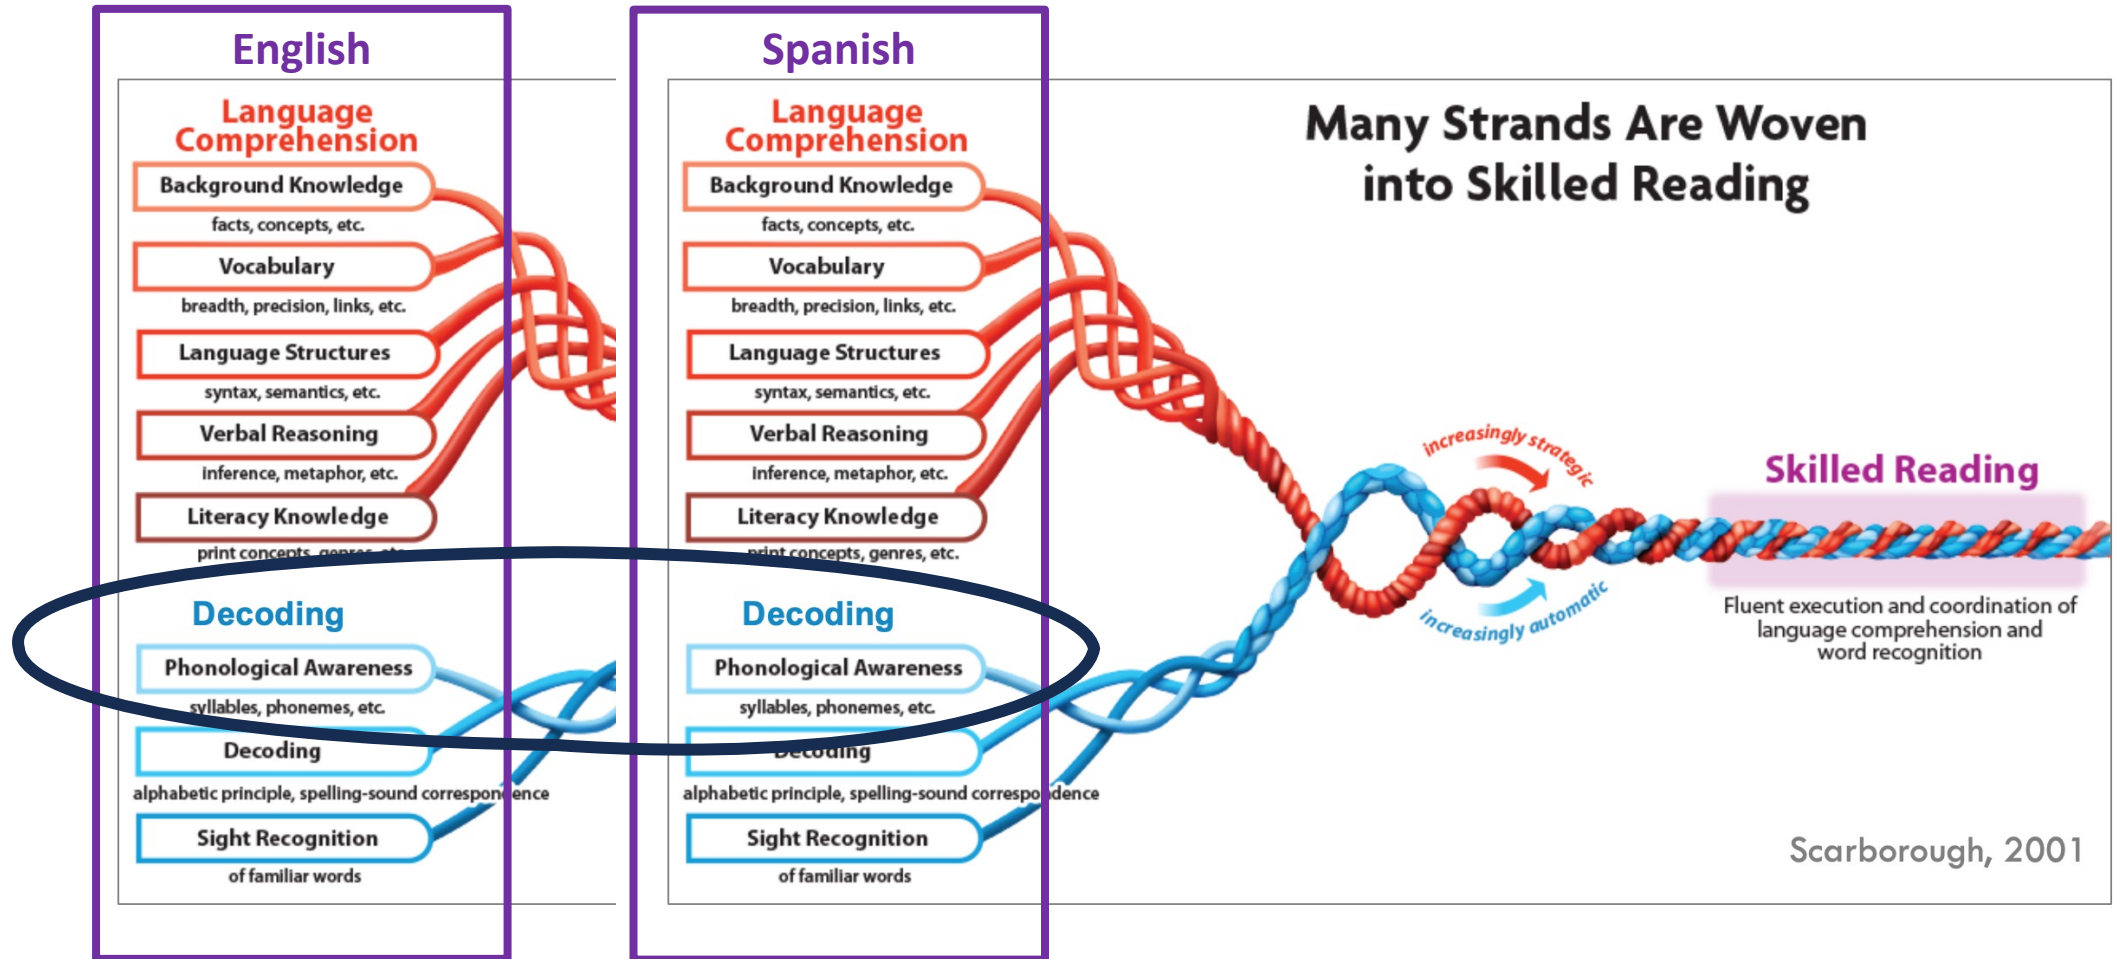

Mean	= .39
Mode	= 0
% below -1 SD	= 53%

We have to interpret these findings in light of the child's language and literacy history.

Why might EL students without dyslexia score poorly on tests of Spanish decoding?

STEP 3:

Consider the code-based skills that underlie decoding

3a. Sound Matching

Sound matching measures the ability to match initial and final sounds

“Which of these picture words starts with the /s/ sound like sock: sun or bear?”

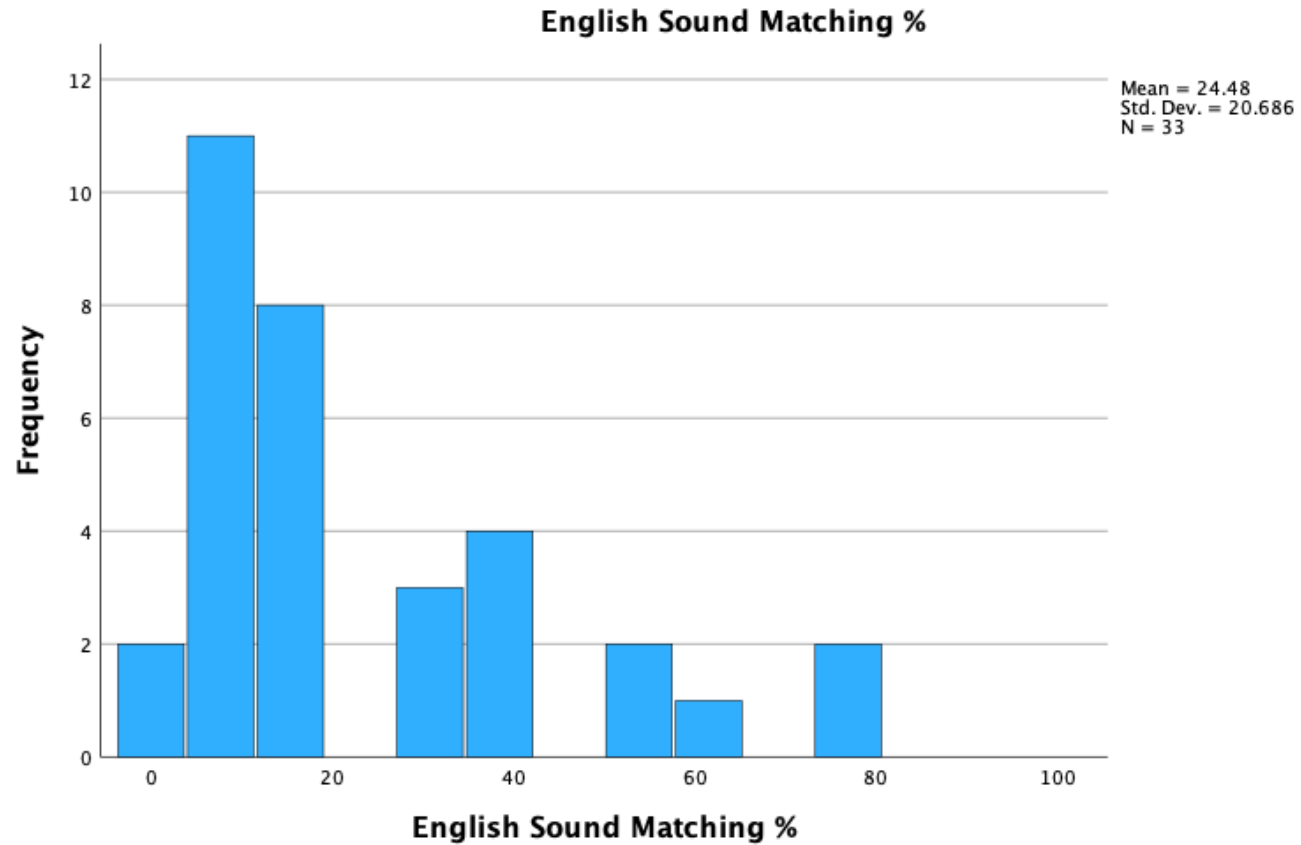

The correct response is **sun**.

“¿Qué palabra empieza con el sonido /s/ como sofa: siete o ratón?”

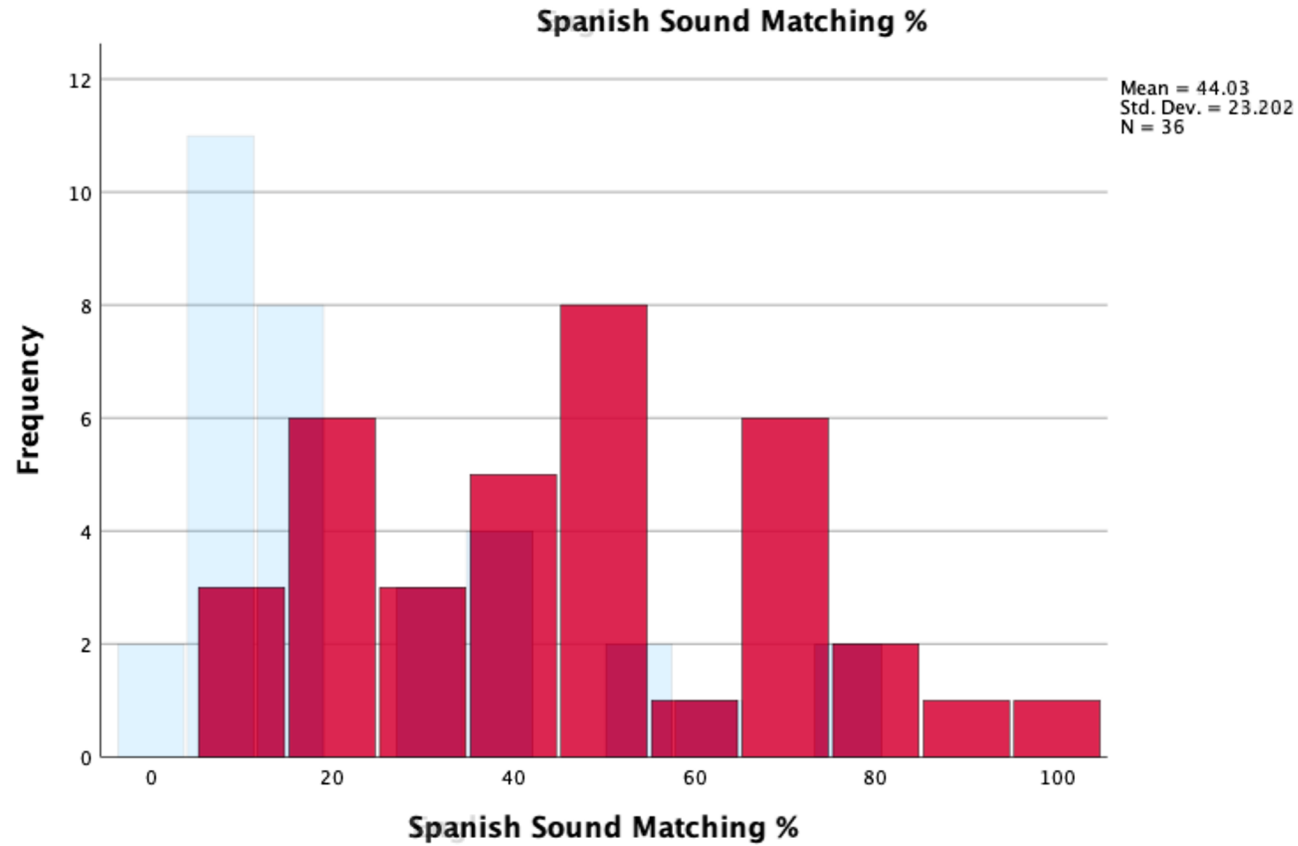

The correct response is **siete**.

English Sound Matching

Mean = 24
Mode = 19
% below -1 SD = 63%

Spanish Sound Matching

Mean = 44
Mode = 45
% below -1 SD = 26%

Interpret ELs' scores cross-linguistically

- “Best Language” approach
- Look at child’s score in English and their score in home language
- Is the student capable of completing the task *in any language*?

Yes	No
✓ I am less worried about a neurodevelopmental phonological deficit	Continue to consider reasons why they may not have scored WNL: <ul style="list-style-type: none"><input type="checkbox"/> Unfamiliar with PA tasks in either language<input type="checkbox"/> Other reason<input type="checkbox"/> Dyslexia

Score: 9 / 10

Best Language Sound Matching

Mean = 45
Mode = 45
% below -1 SD = 25%

3b. Blending Words

Blending Words measures the ability to synthesize sounds to form words.

“What word do these sounds make?”

cow boy

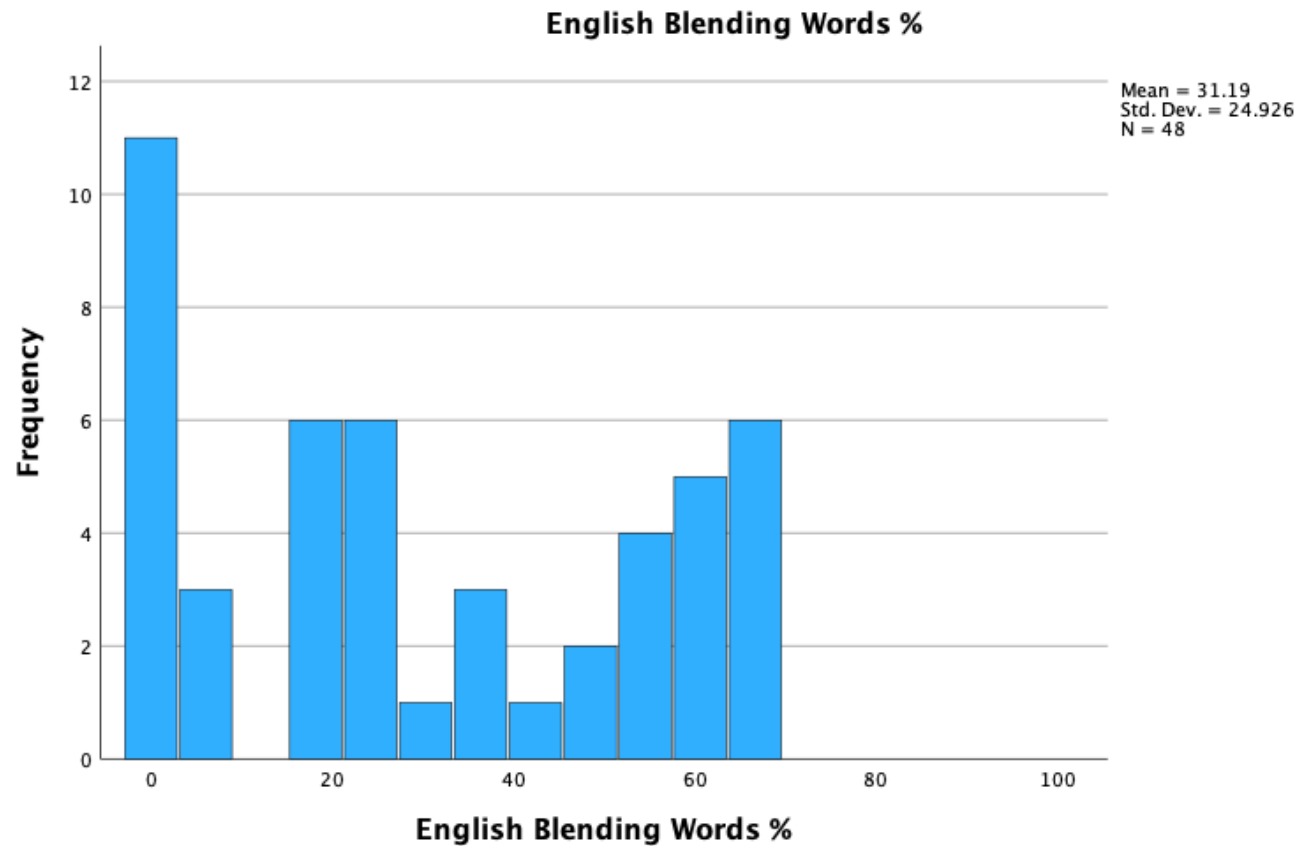

Correct response: **cowboy**

“¿Qué palabra se forma con estos sonidos?”

dul ce

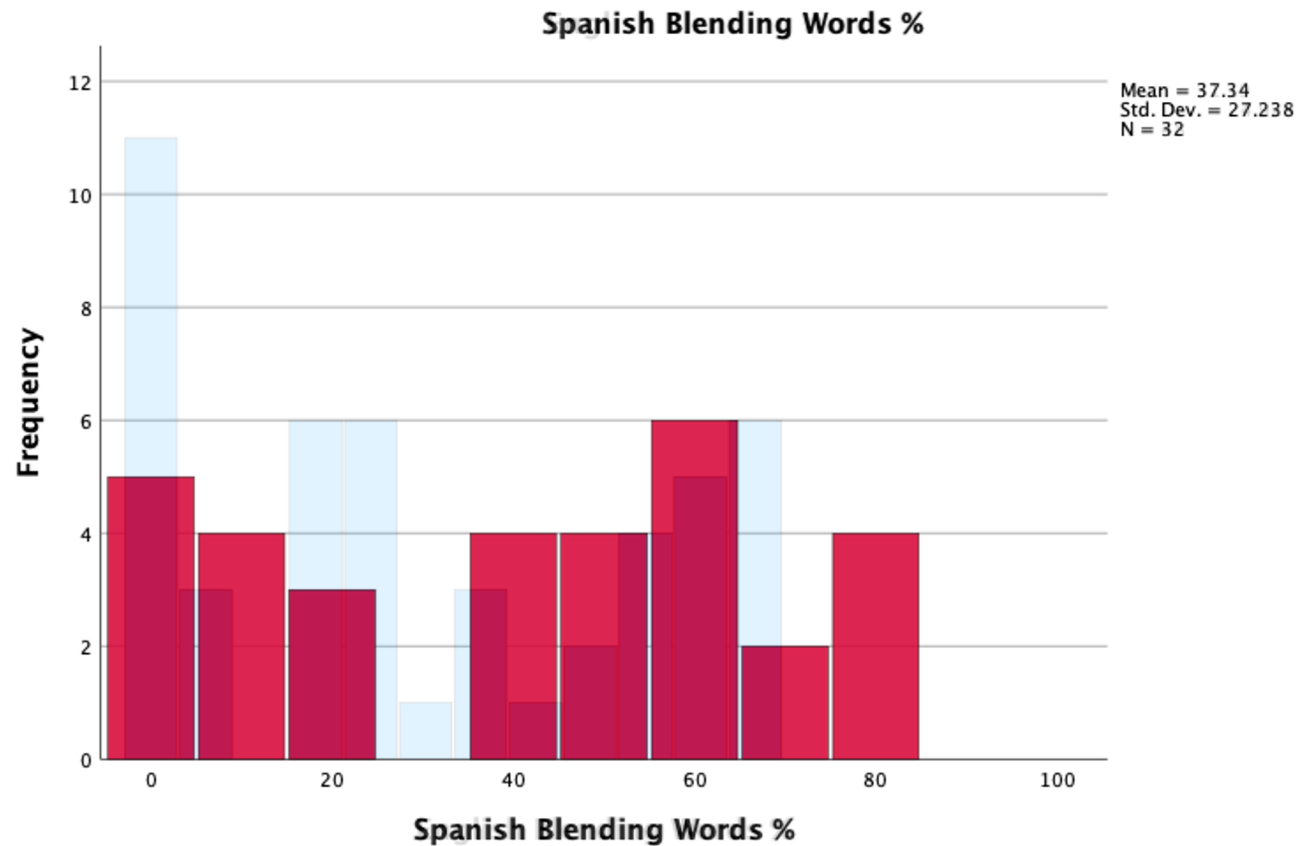

Correct response: **dulce**

English Blending Words

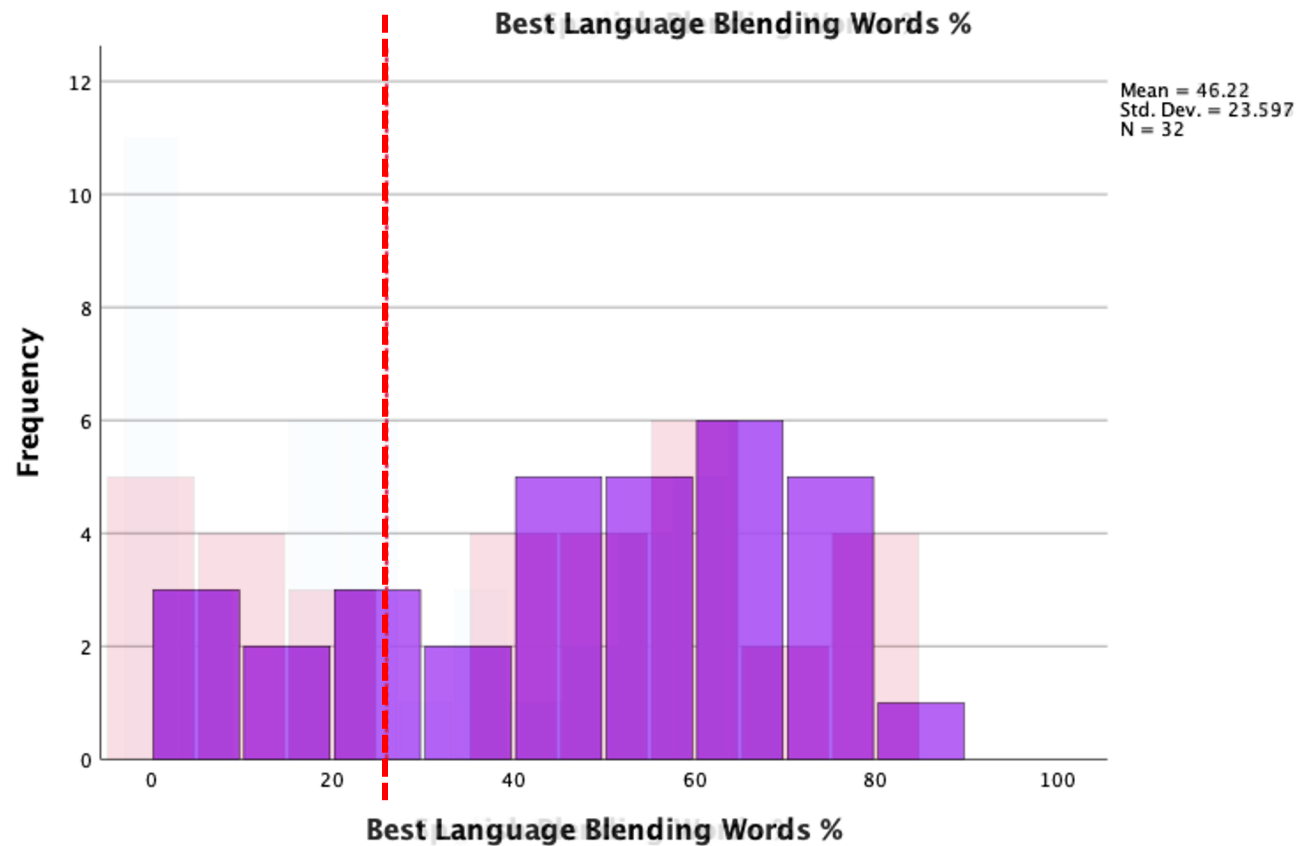

Mean = 31
Mode = 0
% below -1 SD = 54%

Spanish Blending Words

Mean = 37
Mode = 55
% below -1 SD = 50%

Best Language Blending Words

Mean = 46
Mode = 63
% below -1 SD = 25%

3c. Elision

Elision measures the ability to remove phonological segments from spoken words to form other words.

“Say toothbrush.”

“Now say toothbrush without saying tooth.”

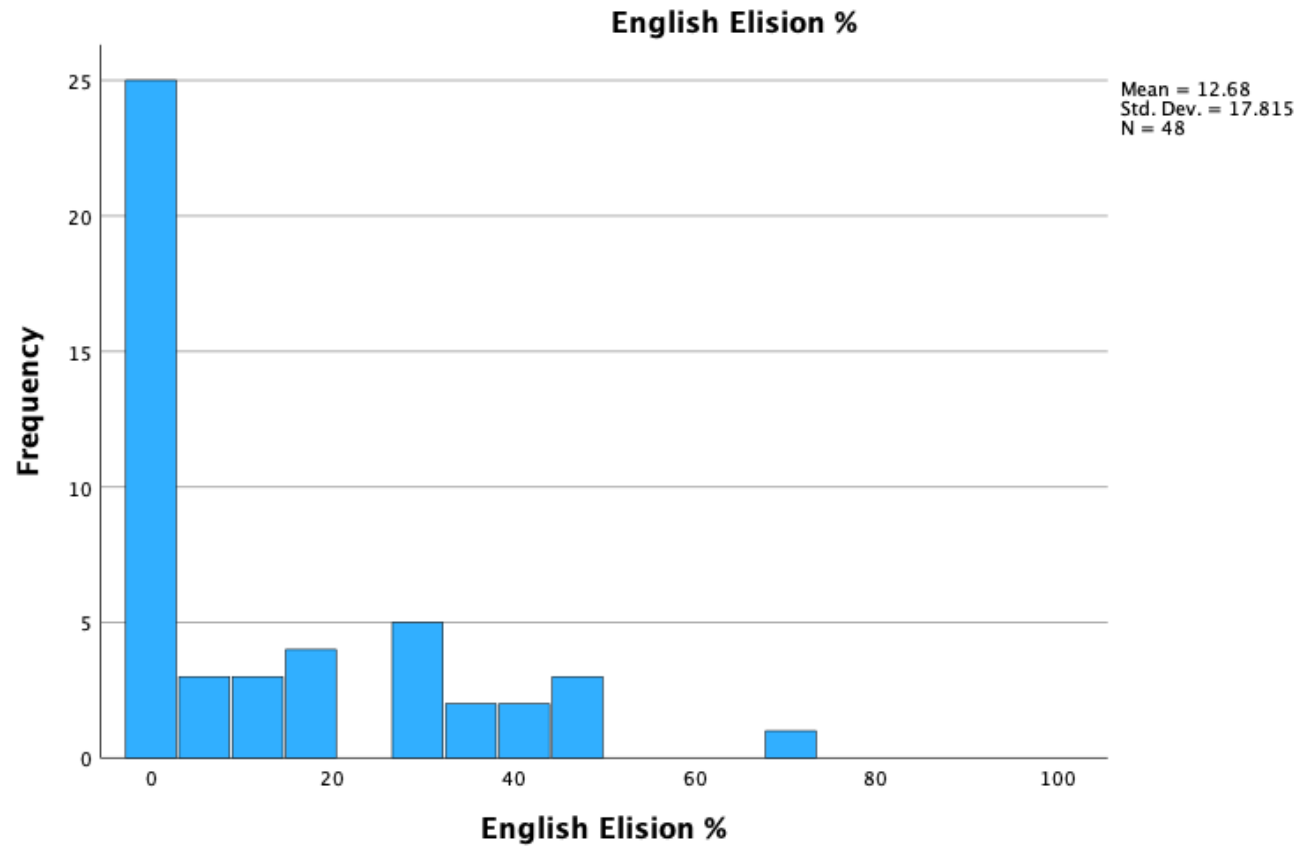

The correct response is **brush**.

“Di saltamontes.”

“Ahora di saltamontes sin decir salta”.

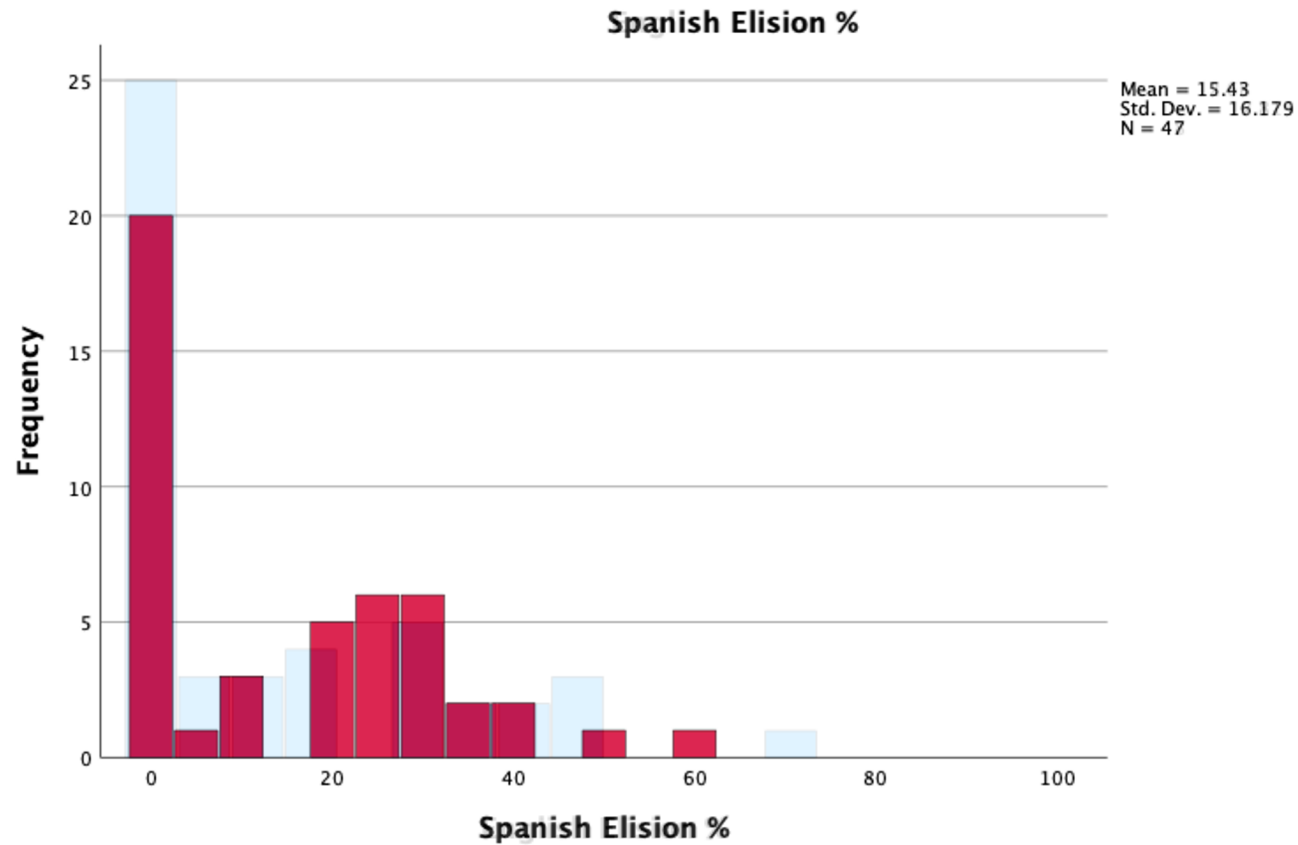

The correct response is **montes**.

English Elision

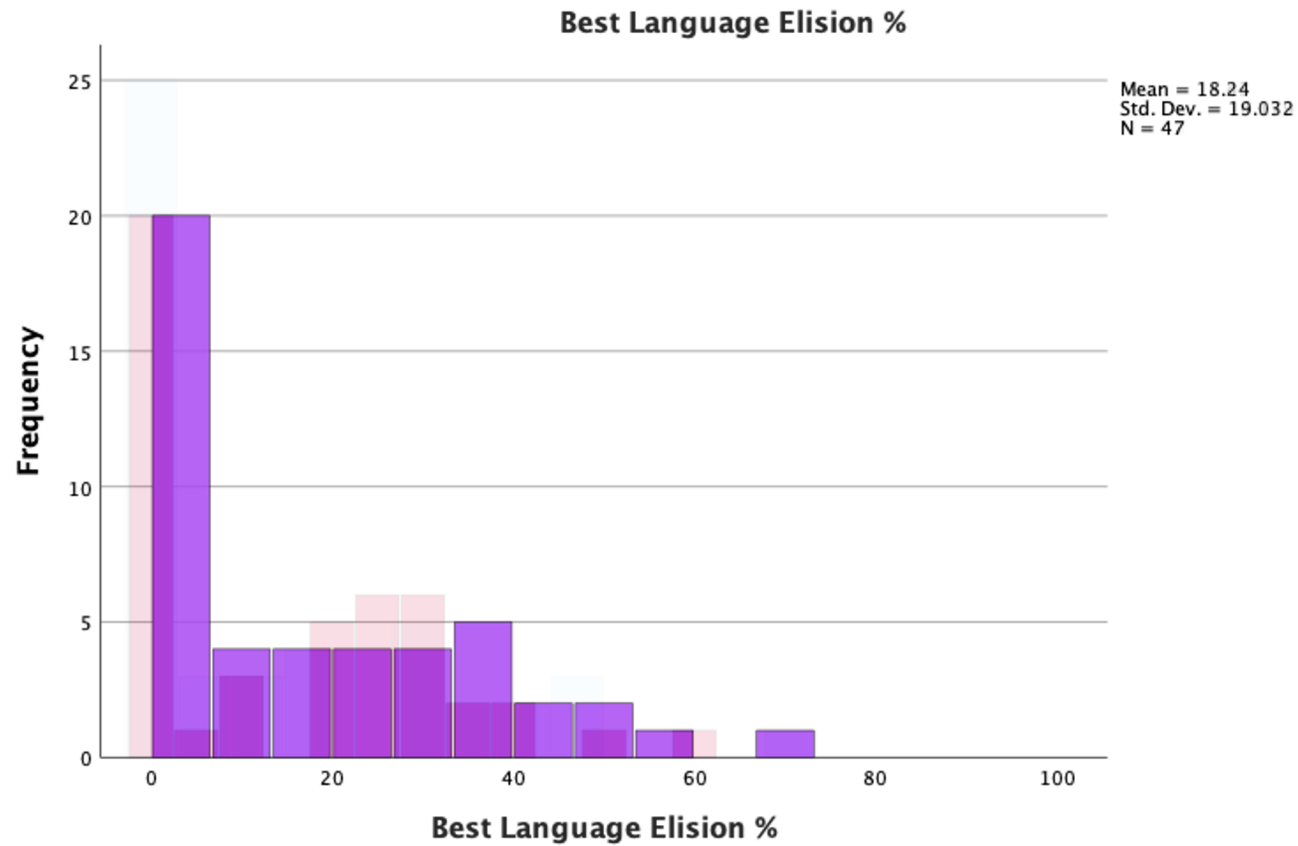

Mean = 13
Mode = 0
% below -1 SD = NA

Spanish Elision

Mean = 15
Mode = 0
% below -1 SD = NA

“Best Language” Elision

Mean = 18
Mode = 0
% below -1 SD = NA

3d. Nonword Repetition

Nonword repetition measures the ability to repeat nonwords that range in length from 3 to 15 sounds.

“I want you to listen to some made-up words. After you hear each made-up word, I want you to say it exactly as you heard it and as clearly as you can.”

Recording plays: **ballop**

“Quiero que escuches algunas palabras inventadas. Después de escucharlas quiero que las repitas tal y como las oigas.”

Recording plays: **dalán**

English Nonword Repetition

Mean = 20
Mode = 0
% below -1 SD = 72%

Spanish Nonword Repetition

Mean = 39
Mode = 56
% below -1 SD = 25%

“Best Language” Nonword Repetition

Mean = 39
Mode = 56
% below -1 SD = 25%

Phonological Awareness Takeaways!

- Phonological awareness is predictive of reading because it shows that kids are tuning in to the sounds of language which they will eventually need to map onto letters to decode
- For diagnostic purposes, we are less concerned about which language the child can perform the skill in --- rather, we care that they are capable of performing it in any language!
- Not all PA measures are the same!
 - Elision is difficult in both languages – maybe not be the best choice for young learners
 - Sound matching and blending words are good candidates
 - Nonword repetition is less directly related to reading, but can tell us about underlying ability

Go back to the Science of Reading...

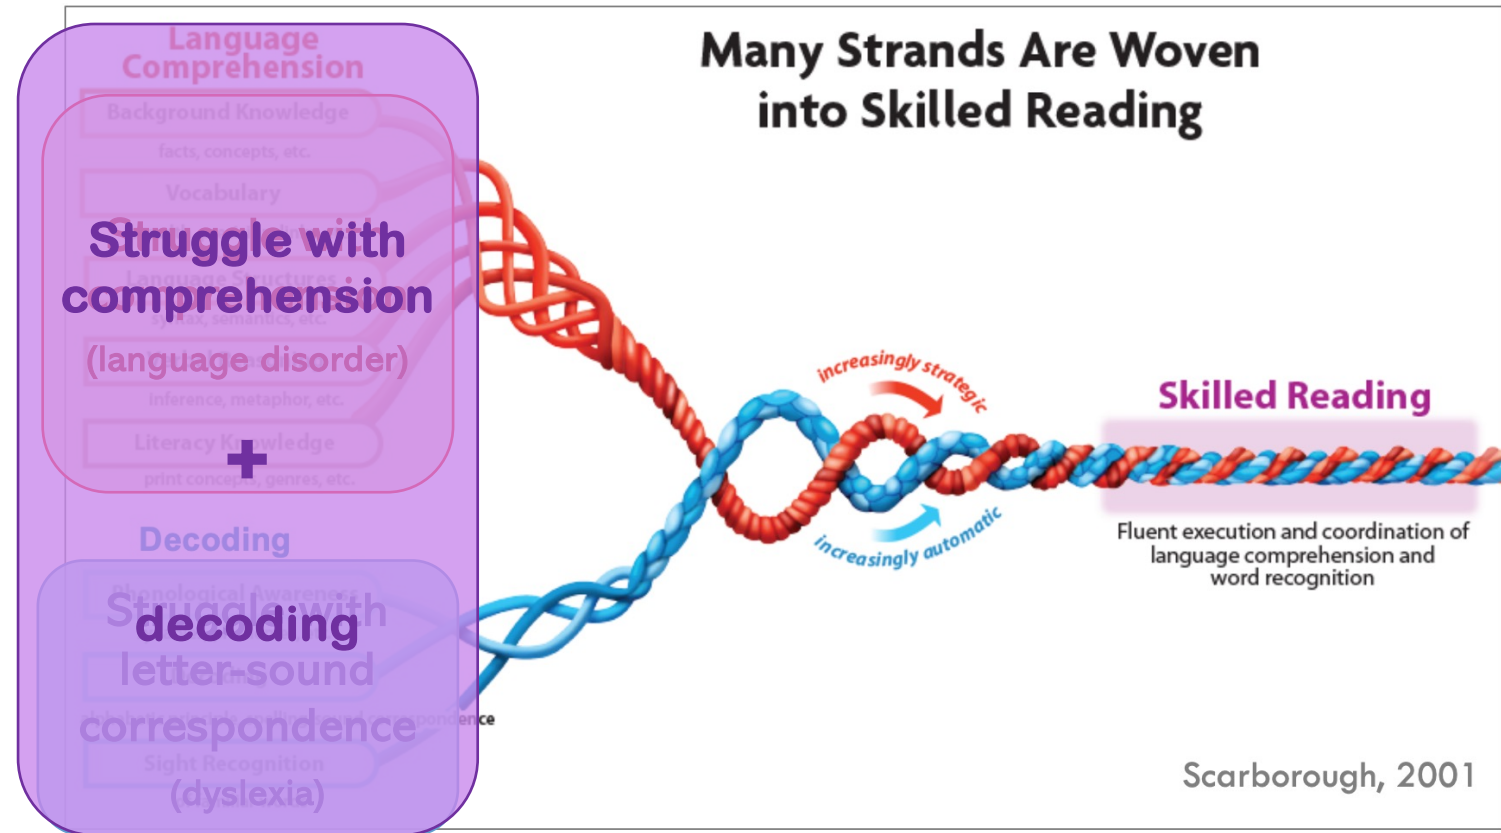

Lot of overlap in language and reading difficulties:

Among children with IEPs for **language**:

- ✓ 80% scored below average on standardized reading assessments
- ✓ 51% fit diagnostic criteria for dyslexia

Among children with IEPs for **reading**:

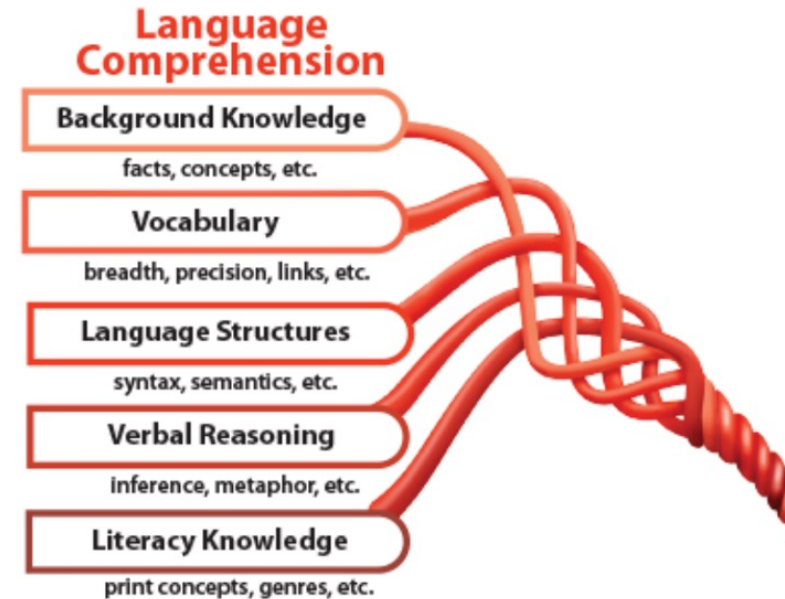

- ✓ 90% scored below average on standardized language assessments
- ✓ 55% fit diagnostic criteria for language disorder

STEP 4:

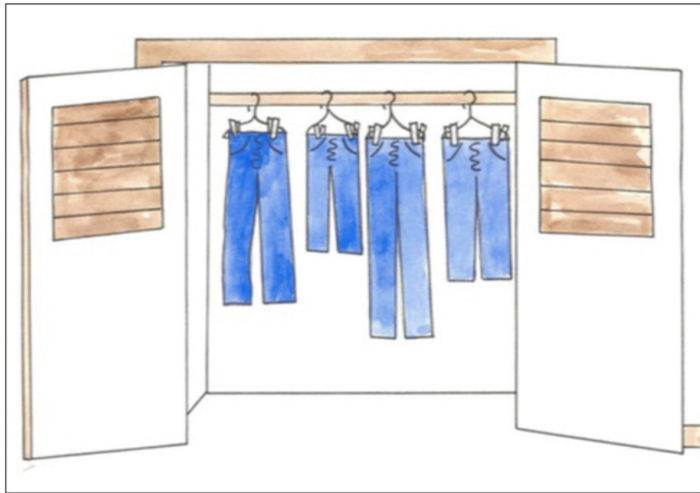

Consider the language strands of the rope

- Experience-expectant
- Typically-developing children are evolutionarily programmed to acquire language by being exposed to speakers of that language
 - We can explicitly teach vocabulary, sentence frames, etc. to speed up acquisition (*especially true for emerging bilinguals!*)
- If a child can not use the language(s) in their environment, it's a strong indicator of a neurodevelopmental disability

Bilingual English Spanish Oral Screener (BESOS)

Semantics:

“What is different about these pants?”

Correct response: Some are short and some are long; different lengths/sizes

Morphosyntax / Grammar:

“Everyday these dogs drink water. This dog does it, too. What does he do everyday? Everyday the dog...”

Correct response: drinks water

English Semantics

Mean	= 75
Mode	= 41
% below 80	= 60%

Spanish Semantics

Mean	= 80
Mode	= 41
% below 80	= 52%

“Best Language” Semantics

Mean	= 92
Mode	= 84
% below 80	= 23%

English Grammar

Mean	= 65
Mode	= 41
% below 80	= 81%

Spanish Grammar

Mean	= 62
Mode	= 41
% below 80	= 87%

“Best Language” Grammar

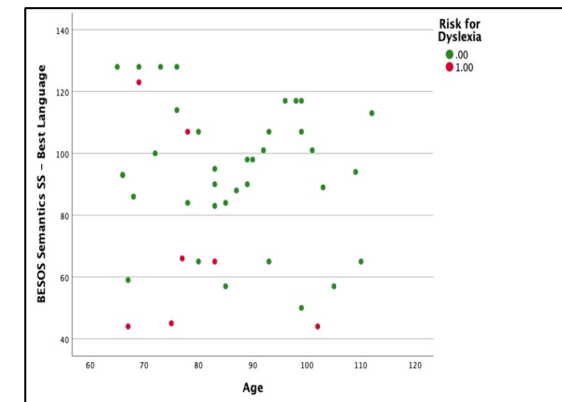

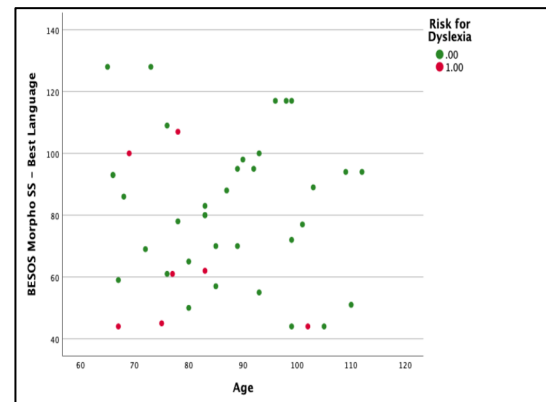

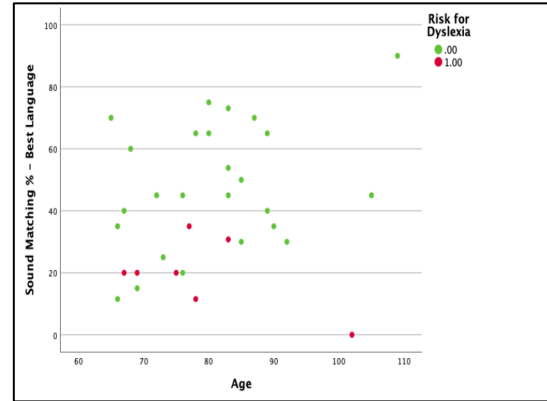

Mean	= 82
Mode	= 93
% below 80	= 46%

Putting it all together

Converging evidence approach

We re-classified ELs at “at risk” if they scored low on 4 of 5 follow-up measures in both of their languages

(i.e., students could not perform tasks in either language)

Converging evidence approach

We re-classified ELs at “at risk” if they scored low on 4 of 5 follow-up measures in both of their languages

(i.e., students could not perform tasks in either language)

Big takeaways

Caution interpreting **code-based skills**:

Consider the home

- What is the home language environment?
- What home literacy activities does the family engage in (and in what languages)?

Consider the school

- Does the child have enough English knowledge to access classroom instruction?
- Is the assessment sensitive enough to capture emerging skills that are still in process of developing / solidifying?

Consider a disorder

- Does the child have typically-developing language skills in both languages?
- Could the child have a neurodevelopmental disorder, like dyslexia?

Main takeaways

01

Consider the child's language and literacy-learning opportunities

02

Consider the child's exposure to explicit and systematic teaching of the skill (and in what language)

- Spanish decoding may not tell us everything, either

03

Expand to the language strands of the rope! And consider the child's *entire* linguistic repertoire --- English only gives us part of what they can do!

Questions? Comments? Thoughts?

Thank you!
